Analisis Economico Aplicado a la Industria  
Petrolera - Franco D'Orazio 2007-12

Analisis economico aplicado a la industria del petroleo, en sus fases de exploracion, produccion, refinacion, transporte y mercadeo. Historia de la industria venezolana. A su tercer siglo continuo de uso global, los hidrocarburos siguen siendo hoy dia la fuente energetica mas importante. Por tal motivo, y dada la complejidad de las evaluaciones requeridas para acometer proyectos de esa naturaleza, proponemos un enfoque integral para su mejor comprension, desarrollando una teoria general de orientacion empirica que hemos denominado "Metodologia Envolvente," que considera la interaccion simultanea de tres conceptos fundamentales. En primer lugar, identificamos una instancia que denominamos "fuente de poder," en la cual se detectan las necesidades de ejecucion de proyectos, se evaluan apropiadamente y se proveen de los recursos necesarios, tanto humanos como de orden

financiero, logistico, equipamiento, herramientas, materiales y hasta del tipo de energia requerida. En una segunda sala, analizaremos las "condiciones de entorno," que circundan, determinan y permiten la realizacion de proyectos en la industria de los hidrocarburos, tales como los factores geopoliticos y de mercado, los aspectos legislativos, impositivos, organizacionales y otros. El tercer concepto por considerar, de genero matematico, esta constituido por las diferentes tecnicas de avaluo de proyectos de inversion, que integran los fundamentos de ingenieria economica y varios metodos de avaluo de proyectos, aplicables tanto a campos en desarrollo como en areas exploratorias.
