Milk Production, Processing and Marketing - Khalid Javed 2019-07-17

Milk is considered as a complete diet for an infant and contains essential nutrients for the development of young mammals. The substances in milk provide energy and antibodies that help protect against infection. Most farmers are paid for the quality and composition of their milk. Whole milk, once approved for use, is pumped into storage silos where it undergoes pasteurization, homogenization, separation, and further processing. Milk is a highly perishable commodity because it is an excellent medium for the growth of microorganisms - particularly bacterial pathogens - that can cause spoilage as well as diseases in consumers. Milk processing allows the preservation of milk for days, weeks, or months and helps to reduce food-borne illness.

The State of the World's Land and Water Resources for Food and Agriculture - Food and Agriculture Organization of the United Nations 2013-06-17

The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and

sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

Mutual Sustainability of Tubewell Farming and Aquifers - Ahmad Saeed Khattak 2014-07-02

This book develops and presents a conceptual model for sustainable-groundwater irrigated agriculture. The model is based on the general principles of the economic theories of cost-benefit relations and behavioral models of resource use. The study has evaluated the advances in tubewell farming and the aquifer potential in arid Balochistan over a period of three decades. It has analyzed the booms and busts of the farming over time taking into consideration the local aquifer limitations and the socio-political considerations and policy framework. Three data

sets - farmers, expert officials and satellite images - have been used to aid validation. By observing the most vital parameters, the study has concluded that the local aquifer has been falling at a rate directly proportional to the growth rate of irrigated farming, suggesting the current development process is unsustainable. For instance, the research finds that tubewell bores have reached down to depths where the term "aquifer mining" applies; as a result, irrigation costs have become too high to allow farming to be economically viable. In addition, desertification is steadily encroaching and the cropping pattern being changed from high-value horticulture to subsistence cropping. The study has also set parameters for assessing the willingness of farmers to accept modern, sustainable strategies and interventions.

Agricultura Por Contrato - Food and Agriculture Organization of the United Nations 2002-01-30

La agricultura por contrato es objeto de un interes creciente, especialmente en paises que anteriormente habian conocido una politica de planificacion centralizada, y en aquellos que han liberado sus mercados tras el cierre de las juntas de mercadeo. Los cambios en los habitos de consumo, por ejemplo el mayor numero de establecimientos de restauracion rapida, la funcion cada vez mas importante de los supermercados y la constante expansion del comercio mundial de productos frescos y elaborados, han dado un ulterior impulso a la agricultura por contrato. El proposito de esta guia es proporcionar consejos a las administraciones de las empresas de agricultura por contrato existentes acerca de la forma de mejorar sus operaciones; a las empresas que estan considerando la posibilidad de iniciar contratos agricolas sobre la base de condiciones previas y decisiones de gestion que aseguren resultados satisfactorios; y a los funcionarios de gobierno que pretenden promover nuevas operaciones de contrato o llevar a cabo el seguimiento de las existentes. En esta guia se describen detalladamente los procedimientos, funcionamiento interno y

mecanismos de seguimiento de esta forma de agricultura; y se hace hincapie en que solo es posible estipular acuerdos agricolas sostenibles cuando los distintos interesados estan comprometidos en una colaboracion a largo plazo."

At the Heart of an Empire - MM Gross 2020-10-22

This study is devoted to the Neo-Assyrian royal household as it emerges from the available cuneiform sources. It addresses the functions as well as the conditions of life and work of the royal household personnel. It clarifies which types of officials, professionals and other employees were active within or on behalf of the royal household. What were their tasks, and what was their position within the royal household and in relation to the king and his family? What departments were in place, and who were the managers? What was the role of lower-ranking personnel within this system? The study also investigates the social and cultural background of the personnel as well as their professional life, including their financial means, the quantity and type of their remuneration, and their career progression. Envisaged also as reference book, the book provides a prosopographical catalogue of the wide range of personnel discussed. As the personal household of the sovereign and the administrative and political centre of the empire, this study of the royal household opens up the immediate environment of the king and his family, but also to the governmental apparatus of the empire as a whole.

Edible Insects - Arnold van Huis 2013

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional

knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use

of insects for food security. And it presents case studies and examples from around the world. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.
