Floodplain Management - Bob

Freitag 2012-06-22

A flooding river is very hard to stop. Many residents of the United States have discovered this the hard way. Right now, over five million Americans hold flood insurance policies from the National Flood Insurance Program, which estimates that flooding causes at least six billion dollars in damages every year. Like rivers after a rainstorm, the financial costs are rising along with the toll on residents. And the worst is probably yet to come. Most scientists believe that global climate change will result in increases in flooding. The authors of this book present a straightforward argument: the time to stop a flooding rivers is before is before it floods.

Floodplain Management outlines a new paradigm for flood management, one that emphasizes cost-effective, long-term success by integrating physical, chemical, and biological systems with our societal capabilities. It describes our present flood management practices, which are often based on dam or

levee projects that do not incorporate the latest understandings about river processes. And it suggests that a better solution is to work with the natural tendencies of the river: retreat from the floodplain by preventing future development (and sometimes even removing existing structures); accommodate the effects of floodwaters with building practices; and protect assets with nonstructural measures if possible, and with large structural projects only if absolutely necessary.

A New Era for Irrigation - National Research Council 1996-11-21

Irrigated agriculture has played a critical role in the economic and social development of the United States—but it is also at the root of increasing controversy. How can irrigation best make the transition into an era of increasing water scarcity? In *A New Era for Irrigation*, experts draw important conclusions about whether irrigation can continue to be the nation's most significant water user, what role the federal government should play, and what the irrigation industry must do to adapt to the conditions of the future. *A New Era for Irrigation* provides data, examples, and insightful commentary on issues such as: Growing competition for water resources. Developments in

technology and science. The role of federal subsidies for crops and water. Uncertainties related to American Indian water rights issues. Concern about environmental problems. And more. The committee identifies broad forces of change and reports on how public and private institutions, scientists and technology experts, and individual irrigators have responded. The report includes detailed case studies from the Great Plains, the Pacific Northwest, California, and Florida, in both the agricultural and turfgrass sectors. The cultural transformation brought about by irrigation may be as profound as the transformation of the landscape. The committee examines major facets of this cultural perspective and explores its place in the future. A New Era for Irrigation explains how irrigation emerged in the nineteenth century, how it met the nation's goals in the twentieth century, and what role it might play in the twenty-first century. It will be

important to growers, policymakers, regulators, environmentalists, water and soil scientists, water rights claimants, and interested individuals.

The New Era of the CCO - Roger Bolton 2018-01-24

The role of the chief communication officer (CCO) in today's enterprise has dramatically changed over the past 30 years. Once focused on getting news out to media outlets, today's CCO has become an integral part of any enterprise—company, corporation, governmental, and nongovernmental entity. Today's CCO is responsible for internal and external communication, with creating and implementing communication strategies that help mold enterprise mission, vision, value, and character, and with building enterprise reputation through stakeholder engagement. As a part of the "C-Suite," the CCO must understand not only the psychology and sociology of the business, but also the role that she has in informing the C-Suite

and the chief executive officer what internal and external stakeholders are thinking and how this may affect corporate image in terms of credibility, confidence, trust, relationship, and reputation. In short, the new CCO must understand both the science and the art of communication and apply that knowledge to advancing her enterprise's goals and objectives through a faster and ever-larger-reaching set of media.

Global Air Transport Management and Reshaping Business Models for the New Era - Kankaew, Kannapat
2022-05-27

The air transport industry is highly vulnerable to environmental changes as was

seen when the recent COVID-19 pandemic caused most airline operations to cease. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. *Global Air Transport Management and Reshaping Business Models for the New Era* provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic

process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students and faculty of higher education, libraries, researchers, economists, government officials, and academicians.
