Radar Instruction Manual - United States. Maritime Administration 2005
Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel

and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. Tokyo Camera Style - John Sypal

2015-02-10

Unique portraits of Japanese photography fanatics and their gear from the trendsetting Tokyo Camera Style blog Founded in 2008, John Sypal's blog, Tokyo Camera Style, has a devoted and passionate international following and has inspired a network of similar blogs worldwide. In street portraits taken on the fly, we see Tokyo's film-camera enthusiasts posing with their favorite photographic equipment. The images not only catalog the amazing range of cameras used by the most obsessive photography geeks but also offer a glimpse into a street culture where the photograph means everything and the camera takes center stage. Now, 300 of Sypal's colorful photographs of weird and wonderful cameras and their creative owners have been gathered together in a one-of-a-kind book. Often taken from above, with the camera owners' faces out of view, the images show telling details that might otherwise have been missed: the clothes, the jewelry, hands and feet, shoes and socks, customized camera straps, and

other photography-related paraphernalia. Beyond the wonderful selection of rare, customized, and vintage analog camera makes, models, and lenses are portraits of the individual personalities who make up the avid street photography scene in Japan.

Practical Watch Repairing - Donald De Carle 2020-02-07

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every

operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

Shooting Old Film Cameras - Paul Moore 2012-12-23

Approximately 113 pages with about 108 color images and this book is ENTIRELY pictorial. There is considerable debate among photographers about whether film is better than digital with about an equal number lining up on both sides and presenting their opinions and relevant and irrelevant data. It is not the purpose of this volume to espouse one position or another. It is sufficient to know that they are

each different and subject to a considerable range of interpretation. However, it is quite enjoyable to take one of these old cameras, that have absolutely no automatic functionality, and create excellent images. I suspect that it is the same force that drives auto enthusiasts to take an old Model T Ford car and restore it. They certainly don't have the power and ease of operation of modern automobiles but they are extraordinarily fun to drive! Unlike other books about old cameras this one does not dwell on the fine technicalities of the individual camera (although limited technical data is present) but to present images taken with each camera to show the reader concrete examples of images taken with each model. The Nikon F100 35MM SLR camera was first made in the late 1999 and discontinued in 2006. The camera is capable of auto everything as well as manual everything except film advance and rewind that will remain auto. The author began photography and photo-journalism in early 1963 when he accepted an offer from his local newspaper to write about and photograph sports events at the Arizona high school where he was a junior. After a stint in the service, he had an opportunity to study photography and printing techniques with Bernard Hoffman, a true gentleman and scholar, and one of the earliest staff photographers for Life Magazine. Since that time he has had thousands of photographs and hundreds of articles published by more than 60 national and international periodicals. He was also a contributing editor for one of them for more than ten years. Topics ran the gamut from professional sports, medicine, archeology, and photography to science. After twenty years away from Arizona he returned in 1985 and it has been the base from which all his photographic excursions are launched. Along with many others he has embraced digital photography but can still be seen, from time to time, peering through the ground glass of a large format camera, hoisting a large medium format 6x7, or indeed still using a 35mm film camera. The

photographer currently has fine art photography on exhibit at The Center for Fine Arts in Globe, Arizona, and is currently represented by more than ten stock photo agencies where he has more than 13,000 photographs available for commercial use.
