**Pediatric Neurocritical Care** - Nicholas S. Abend, MD 2012-11-28  
Optimal care of children with neurocritical illness often involves multi-specialty collaboration, and recent years have seen a substantial expansion in the availability of data to guide acute care. This book addresses overall approaches to children with neurocritical illness and the management of specific conditions. It offers up-to-date, concise, and clinically relevant guidance to clinicians providing acute care to children with neurologic disorders. Reflecting the spectrum of specialties involved in pediatric neurocritical care, contributors are drawn from the fields of critical care medicine,

neurology, neurosurgery, rehabilitation medicine, and many affiliated specialties. The chapters in this book are authored by experts in each individual topic, and co-edited by a neurologist and intensivist to ensure all topics have been fully addressed from both perspectives. The initial chapters focus on assessment and management of common conditions such as coma, headache, and elevated intracranial pressure. The middle chapters cover assessment and management of specific conditions including traumatic brain injury, demyelinating disorders, stroke subtypes, central nervous system disorders, and more. The final chapters of the book address ethical and psychological aspects of acute neurocritical illness. The complete continuum of care is discussed, from assessment, monitoring, and condition-specific management of specific problems through rehabilitation and end of life considerations.

**Pediatric Trauma Care II** - AHC Media, LLC 2014-03-17

Pediatric trauma continues to have a significant impact on the health and well-being of children in the United States. Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14,000 deaths among all children 0 to 18 years of age. In 2008, there were more than 8.6 million nonfatal injuries among newborn to 18-year-olds, with an injury rate of greater than 1 in 10. There is little debate that a coordinated effort and pediatric-specific advances in pediatric trauma systems, prehospital care and hospital care, and injury prevention can have a positive impact on pediatric trauma outcomes in the United States. However, there are still gaps in access to centers that deliver pediatric-focused trauma care, especially in rural areas. Furthermore, there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the pediatric trauma patient. This book is targeted to review critical aspects of the care of the pediatric trauma patient, highlighting the most common and critical injuries encountered in the acute care setting.

**Pediatric Nephrology** - A.B. Gruskin 2012-12-06

The Proceedings of the Fifth International Pediatric Nephrology Symposia are dedicated to those who make the writing possible: the delegates; those who wanted to attend, but could not, and to our colleagues, families and friends who

helped organize the meeting. with the advent of certification of pediatric nephrologists in the USA and the increasing numbers of pediatric nephrologists contributing to and practicing this specialty throughout the world, it is appropriate that we begin to record our international symposia in order to periodically document the State of the Art of pediatric nephrology and to share new information in a timely fashion with colleagues who care for children. Four previous international pediatric nephrology symposia have been sponsored by the International Pediatric Nephrology Association. These meetings were held in Guadalajara, Mexico, 1968, Paris, France, 1971, Washington, DC, USA, 1974 and Helsinki, Finland, 1977. This is the first time that it has been possible to organize the publication of the proceedings of a symposium. The enclosed manuscripts represent more than seventy percent of the symposia presentations delivered at the Fifth International Pediatric Symposia (October 6-10, 1980, Phila., PA) which was - hosted by St. Christopher's Hospital for Children and The Children's Hospital of Philadelphia representing the Departments of Pediatrics of Temple University School of Medicine and The University of Pennsylvania School of Medicine.

Taking a case-based approach, *Pediatric Emergency Medicine: Chief Complaints and Differential Diagnosis* is arranged by chief complaint, using real patient scenarios to help the reader work through the inductive and deductive reasoning needed to assess, evaluate, treat, and disposition pediatric patients with urgent complaints. Cases are structured in the way in which they are presented during medical care, allowing practitioners to become comfortable with the general structure of case presentations: chief complaint, HPI, PMH, ROS, exam, and ancillary studies. This volume also discusses disease processes and their differentiations, providing in-depth knowledge regarding current standards of diagnosis and care.

Clinical Manual of Pediatric

Consultation-Liaison Psychiatry - Richard J. Shaw 2019-09-16  
Clinical Manual of Pediatric Consultation-Liaison Psychiatry offers a comprehensive guide for mental health clinicians, trainees, and students to pediatric consultation-liaison psychiatry (CLP), a specialized area of psychiatry whose practitioners have particular expertise in the diagnosis and management of psychiatric disorders in complex physically ill children and adolescents. Patients commonly fall into one of three descriptive categories: those with comorbid emotional and physical illnesses that complicate each other's management; those with distressing somatic symptoms plus abnormal thoughts, feelings, and behavior in response to these symptoms; and those with psychiatric symptoms that are a direct consequence of a physical illness and/or its treatment. The text, authored by two luminaries in pediatric psychiatry, thoroughly explores the challenges faced by these patients and pediatric practitioners and mental health professionals who together care for them, addressing, in a concrete and practical manner, the wide variety of issues encountered in the pediatric hospital. These concerns range from how to address treatment nonadherence in children to how to conduct a psychosocial assessment of a solid organ transplant recipient. The text's carefully chosen features and valuable content include: Historical context for the evolution of "pediatric psychosomatic medicine" to "pediatric consultation-liaison psychiatry," ensuring an accurate, up-to-date representation of the field and proper integration with DSM-5 classification. Detailed clinical assessment protocols, with guidance for exploring interrelated

domains such as illness factors, emotional impact, family functioning, and social relationships. These practical, step-by-step guides assist the consultant in conducting a comprehensive psychiatric/psychological assessment. A target symptom-oriented chapter on psychopharmacology in the physically ill child, which offers guidance on management of acute agitation, insomnia, fatigue, depression, and anxiety. The treatment algorithms presented are designed to be easily understood by non-psychiatric clinicians. Guidance on the use of practical interventions to help physically ill children undergoing traumatic medical procedures, including hypnosis, progressive muscle relaxation, and breathing techniques. These specific techniques will help the clinician in assisting distressed patients. The previous edition was considered the gold standard for books in the field. This new, thoroughly revised iteration of Clinical Manual of Pediatric Consultation-Liaison Psychiatry will doubtless inspire similar acclaim for its rigor, accessibility, and clinical wisdom.
