OCD - Michael A. Tompkins 2012-01-01

When someone is diagnosed with obsessive-compulsive disorder (OCD), chances are they've been living with the symptoms for a long time. People with OCD may have long felt embarrassed by their thoughts and behaviors, which may include fear of contamination, the need for symmetry, pathological doubt, aggressive thoughts, repeating behaviors, and obsessive cleaning. *OCD: A Guide for the Newly Diagnosed* helps readers understand how OCD works so they can develop better strategies for coping with their symptoms. This pocket guide offers guidance for coping with the diagnosis itself, discusses stigmas related to OCD, and includes help for readers unsure of who they should tell about the diagnosis. Readers also learn about the most effective treatment approaches and easy ways to begin to manage their OCD symptoms. An OCD diagnosis can be a devastating event, or it can be a catalyst for positive change. Books in the *Guides for the Newly Diagnosed* series provide readers with all the tools they need to process a diagnosis in the healthiest way possible, and then move forward to manage their symptoms so that the disorder doesn't get in the way of living a fulfilling life. This book has been awarded The Association for Behavioral and Cognitive Therapies Self-Help Seal of Merit — an award bestowed on outstanding self-help books that are consistent with cognitive behavioral therapy (CBT) principles and that incorporate scientifically tested strategies for overcoming mental health difficulties. Used alone or in conjunction with therapy, our books offer powerful tools readers can use to jump-start changes in their lives. This book is a part of New Harbinger Publications' *Guides for the Newly Diagnosed* series. The series was created to help people who have recently been

diagnosed with a mental health condition. Our goal is to offer user-friendly resources that provide answers to common questions readers may have after receiving a diagnosis, as well as evidence-based strategies to help them cope with and manage their condition, so that they can get back to living a more balanced life. Visit www.newharbinger.com for more books in this series.

Processing Mathematics Through Digital Technologies - Nigel Calder 2012-01-01

Digital technologies permeate our lives. We use them to communicate, research, process, record, and for entertainment. They influence the way we interact in the world, the way we live. Digital technologies also offer the potential to transform the nature of the learning process in mathematics. The learning environment, the types of tasks learners can engage with, and the nature of that engagement differs from working in other environments. The Internet, for instance, presents greater scope for child-centered, inquiry-based learning. Dynamic geometry software and GoogleEarth offer interactive ways of exploring shape, position and space that is not possible with the pencil-and-paper medium. This book provides insights into how mathematical understanding emerged for primary-aged children (5-13 years) when they investigated mathematical tasks through digital media. It considers learning theories that are frequently used in mathematics education, and situates a contemporary interpretive approach within those perspectives. A key purpose was to provide some practical tasks for teachers/teacher educators to incorporate digital technologies into their mathematics programmes, tasks that have been used successfully for learning. This is a significant reference book for primary-school teacher education and a valuable resource for all schools teaching at that age.

Neurobiology of Monotremes - Ken Ashwell 2013-12-01

Neurobiology of Monotremes brings together current information on the development, structure, function and behavioural ecology of the monotremes. The monotremes are an unusual and evolutionarily important group of mammals showing striking behavioural and physiological adaptations to their niches. They are the only mammals exhibiting electroreception (in the trigeminal sensory pathways) and the echidna shows distinctive olfactory specialisations. The authors aim to close the current gap in knowledge between the genes and developmental biology of monotremes on the one hand, and the adult structure, function and ecology of monotremes on the other. They explore how the sequence 'embryonic structure > adult structure > behaviour' is achieved in monotremes and how this differs from other mammals. The work also combines a detailed review of the neurobiology of monotremes with photographic and diagrammatic atlases of the sectioned adult brains and peripheral nervous

system of the short-beaked echidna and platypus. Pairing of a detailed review of the field with the first published brain atlases of two of the three living monotremes will allow the reader to immediately relate key points in the text to features in the atlases and will extend a universal system of brain nomenclature developed in eutherian brain atlases by G Paxinos and colleagues to monotremes.

Materia Medica and Therapeutics - Linette Althana Parker 1916

Integrating Information Technology Into the Teacher Education Curriculum - Nancy Wentworth 2004

While there are books that address the integration of technology into teaching curricula, very few address the process for teacher education faculty and the systemic reform of a teacher education program. *Integrating Information Technology into the Teacher Education Curriculum: Process and Products of Change* provides practical examples and suggestions for teacher education departments striving to integrate new technologies into their curriculum. It will help in the effort to motivate faculty to make utilizing new technology a natural strategy for the teachers they are educating. It describes the creation of Design Teams at Brigham Young University's McKay School of Education (funded by a PT3 grant) and how these teams worked to successfully reconfigure the school's teacher preparation curricula.

Veterinary Hematology - William J. Reagan 2019-05-21

Now in its third edition, *Veterinary Hematology: Atlas of Common Domestic and Non-Domestic Species* continues to offer veterinarians and veterinary technicians an essential guide to veterinary hematology. Comprehensive in scope, the atlas presents the fundamentals of both normal and abnormal blood cell morphologies, with coverage of a wide range of species, including dogs, cats, horses, ruminants, llamas, rats, mice, nonhuman primates, ferrets, rabbits, guinea pigs, birds, amphibians, and reptiles. Designed as a useful and accessible guide, the updated third edition presents more than 300 color images and includes a new chapter that describes the best techniques for using hematology instruments. The authors—noted experts on the topic—clearly show how to identify and interpret the hematological changes that may occur in a variety of species. In addition, a companion website offers a wealth of additional hematological images. This vital atlas: Provides an updated edition of the popular veterinary hematology atlas for veterinarians, veterinary students, and veterinary technicians Contains a new instructive chapter on hematology instrumentation Presents hundreds of high-quality color photographs that help in identification Covers a range of species from dogs and cats to birds and reptiles Features a companion website that provides a wealth of hematological images Written for both novice and experienced veterinarians, *Veterinary Hematology* provides a complete resource to blood morphologic abnormalities in domestic and non-domestic species.

Econometrics Informing Natural Resources Management - Phoebe Koundouri 2004

This fascinating book outlines the fundamental principles and difficulties that characterise the challenging task of using econometrics to inform natural resource management policies, and illustrates them through a number of case studies from all over the world. The book offers a comprehensive overview of the broader picture of the state-of-the-art in econometrics as applied to environmental and natural resource management. It includes a wide range of econometric techniques that can be used to inform natural resource management, while keeping a balance between methods and applications. Case studies have been carefully chosen to be of major concern in the arena of environmental policy, mainly in Europe (both EU member states and assessing countries), but also in the US and some developing countries. *Econometrics Informing Natural Resources Management* will be welcomed by academics and researchers interested in the areas of natural resource economics and econometrics, and also applied econometrics.

Conducting Meta-Analysis Using SAS - Winfred Arthur, Jr. 2001-06

Conducting Meta-Analysis Using SAS reviews the meta-analysis statistical procedure and shows the reader how to

conduct one using SAS. It presents and illustrates the use of the PROC MEANS procedure in SAS to perform the data computations called for by the two most commonly used meta-analytic procedures, the Hunter & Schmidt and Glassian approaches. This book serves as both an operational guide and user's manual by describing and explaining the meta-analysis procedures and then presenting the appropriate SAS program code for computing the pertinent statistics. The practical, step-by-step instructions quickly prepare the reader to conduct a meta-analysis. Sample programs available on the Web further aid the reader in understanding the material. Intended for researchers, students, instructors, and practitioners interested in conducting a meta-analysis, the presentation of both formulas and their associated SAS program code keeps the reader and user in touch with technical aspects of the meta-analysis process. The book is also appropriate for advanced courses in meta-analysis psychology, education, management, and other applied social and health sciences departments.
