Basic Medical Sciences for MRCP - Philippa J. Easterbrook 2005

A revision book intended primarily for candidates sitting their MRCP Part 1 examination and which covers all the essential basic sciences. It focuses on the recurring themes which come up in the questions. The book also includes a chapter on clinical pharmacology (which alone accounts for up to 30% of the questions), looking at aspects of drug-induced disease and drug interactions. Finally there is a chapter on statistics and epidemiology which is rarely covered in other texts, but is often included in the exam. Despite the changes to the teaching of the undergraduate in medicine and the integration of the basic sciences with clinical education, the junior doctor, faced with

postgraduate examinations, is always going to be poorly prepared for those increasingly important subjects. This book presents the essential information in the form of lists, tables, diagrams and flow charts.

Clinical Medicine for the MRCP PACES - Gautam Mehta 2010-07-15

A book of 75 cases which mimic the style and approach of the MRCP PACES exam. The book will equip the candidate attempting the MRCP PACES examination, but will also provide an overview of evidence-based medicine for competency-based training.

The Virtues in Medical Practice - Edmund D. Pellegrino 1993-11-11

In recent years, virtue theories have enjoyed a renaissance of interest among general and medical ethicists. This

book offers a virtue-based ethic for medicine, the health professions, and health care. Beginning with a historical account of the concept of virtue, the authors construct a theory of the place of the virtues in medical practice. Their theory is grounded in the nature and ends of medicine as a special kind of human activity. The concepts of virtue, the virtues, and the virtuous physician are examined along with the place of the virtues of trust, compassion, prudence, justice, courage, temperance, and effacement of self-interest in medicine. The authors discuss the relationship between and among principles, rules, virtues, and the philosophy of medicine. They also address the difference virtue-based ethics makes in confronting such

practical problems as care of the poor, research with human subjects, and the conduct of the healing relationship. This book with the author's previous volumes, *A Philosophical Basis of Medical Practice and For the Patient's Good*, are part of their continuing project of developing a coherent moral philosophy of medicine. **The Hippocratic Oath and the Ethics of Medicine** - Steven H. Miles
2005-06-02
This short work examines what the Hippocratic Oath said to Greek physicians 2400 years ago and reflects on its relevance to medical ethics today. Drawing on the writings of ancient physicians, Greek playwrights, and modern scholars, each chapter explores one passage of the Oath and concludes with a modern case discussion. This book is

for anyone who loves medicine and is concerned about the ethics and history of the profession.

Integrative

Gastroenterology -

Gerard E. Mullin

2019-09-27

Digestive complaints have become increasingly common. Recent statistics show that gastrointestinal complaints account for nearly a third of all visits to primary care doctors and that nearly one in two Americans suffer from digestive disease. Millions more suffer from conditions such as migraine headaches, arthritis, mood disorders, chronic fatigue, asthma, allergies, and menstrual dysfunction, which are all related to a disorder in digestive health. Despite the evidence in support of integrative approaches to treatment and

prevention of digestive symptoms, these approaches are largely overlooked in treating gastrointestinal disorders. Rather, treatment plans tend to be exclusively pharmacologically based and have appreciable toxicity. Integrative Gastroenterology, Second edition, is a comprehensive guide to helping health care practitioners understand and appreciate how to manage patients with gastrointestinal conditions integrating conventional and complimentary approaches. This text reviews the latest advances in science and research with regards to the gut microbiome, physiology, and interconnections between the gut and other organ systems. Coverage includes a diverse range of treatment methods, such as probiotics,

meditation, massage, yoga, supplements, special diets, energy medicine, homeopathy, and acupuncture, as well as a special section devoted to mind-body medicine in digestive health and disease. In discussing unconventional treatments, the authors address many of the controversies that surround the remedies.

Self-assessment

Questions for MRCP Part 2 - Bilal Iqbal 2021

"Structured in the same way as the MRCP part 2 written exam, the two volumes of this self-assessment book together contain over 270 questions based on clinical scenarios which address the more difficult aspects of the medical curriculum. Chapters are divided by clinical specialties. Volume 1 includes: cardiology, dermatology, endocrinology and

metabolic medicine, gastroenterology, haematology, and infectious diseases. Volume 2 includes: neurology and ophthalmology, oncology and palliative care, psychiatry and clinical pharmacology, nephrology, respiratory medicine and rheumatology. The first section of each chapter contains a clinical scenario followed by a multiple-choice, 'best-of-five', question written in the style of the MRCP exam. The second section of each chapter contains the answer, a concise and clear explanation of the reasoning behind the given answer being correct, as well as a comprehensive tutorial on the subject matter which uses high-quality diagrams and tables to help readers absorb and retain information quickly and orderly.

References for further reading are also then given for those interested in a broader review"--

Parkinson's Disease -

Dr. Stewart A. Factor,
D0 2007-12-15

Parkinson's disease (PD) is the second most common neurodegenerative disease in the world. Still the only major text on the subject, the completely revised and updated second edition of *Parkinson's Disease: Diagnosis and Clinical Management* comes at a time when specialists have made important advances in our understanding of the etiology, pathogenesis, investigation, and management of Parkinson's disease. The book includes 23 completely new chapters, and has updated information on: Genetics Pathology Biomarkers Pathogenesis Impulse control disorders in

Parkinson's disease
Updated outcome measures
Complementary and alternative medicine for the treatment of Parkinson's disease
Together the chapters form a comprehensive review of the many issues facing PD physicians today. Lucid and easily readable from beginning to end, each chapter may also stand on its own as a scholarly review of the individual subject. Each one is concisely written and heavily referenced for this purpose. The second edition of *Parkinson's Disease: Diagnosis and Clinical Management* provides a state-of-the-art review of where we've been, where we are now, and where we are going in treating this disease. *Examination Medicine -* Nicholas Joseph Talley 2010
Includes information on: basic training

requirements; the written examination; an approach to the clinical examination; the long case, the short case and examples. Talley, University of Sydney; O'Connor, Canberra Hospital, Australia.

Severe Asthma - Kian Fan Chung 2019-06-01

Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma – epidemiology, diagnosis, mechanisms, treatment and management

– but has a particular focus on recent understanding of mechanistic heterogeneity based on an analytic approach using various 'omics platforms applied to clinically well-defined asthma cohorts. How these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.

Best of Five MCQs for the Gastroenterology SCE
- Charlotte Rutter
2013-02-28

Best of Five MCQs for the Gastroenterology SCE is the first revision guide designed specifically for this new high-stakes exam. It contains 210 best of five questions with explanatory answers,

each accurately reflecting the layout of questions in the exam. The book is divided into seven subject areas, covering all the main themes of the exam, and providing a thorough assessment of the candidate's gastroenterological knowledge. Where relevant, questions are illustrated with full colour photographs including endoscopic, radiological and histology images. Uniquely, the explanatory answers include references to guidelines and other sources to enable candidates' further reading and study.

Mrcp Paces Clinical Pearls - Omar Kirresh
2020-03-22

MRCP PACES is widely regarded as the most challenging hurdle to obtaining membership to the Royal College of Physicians. Passing the

exam requires more than knowledge alone and many incredibly talented doctors fail every year due to various factors. The most common failure point is scoring poorly on the 'physical signs' strand of the exam. This book is designed to be a complete yet concise guide to the MRCP PACES examination and will guide you through the stations in a systematic way to help you score top marks in the exam. This book does not replace examining patients to elicit signs, and omitting this step in your preparation is a sure way to fail! This book will also be useful for medical students doing their OSCE's who are keen to get an edge over their peers, though the level of detail will be greater than required. This book will cover the key aspects of the exam including: (1)The exam

format (2) Examination routines (3) Common and important cases represented in the PACES exam (4) Key physical findings (5) Presentation techniques for the different stations (6) Useful skills to narrow the differential diagnosis from the end of the bed. It is the book we wish we had when we sat the MRCP PACES exam!

Clinical Medicine for the MRCP PACES - Gautam Mehta 2010-07-15

A book of over 150 cases which mimic the style and approach of the MRCP PACES exam. The book will equip the candidate attempting to pass the MRCP examination, and will also provide an overview of evidence-based medicine for competency-based training.

Integrative Men's Health - MD, MPH Myles D. Spar 2014-02-05

As a field, men's health

is far behind women's health in terms of the availability of reliable, scientifically based information that men, their partners, and health care providers can rely on when seeking information and treatment. Moreover, integrative approaches are becoming more popular with men whose healthcare providers understand that most of the leading causes of morbidity and mortality in men, including cardiovascular disease, cancer, urologic disease, and sexual dysfunction, can be ameliorated using an integrative approach, with more emphasis on the patient-provider relationship, lifestyle change, and the use of proven complementary modalities. Integrative Men's Health provides an evidence-based perspective on the health problems that

affect men and the ways in which such problems may be prevented or treated utilizing a broad armamentarium of approaches - from conventional tools to complementary modalities. All chapters take into consideration of all the factors that influence men's health including body, mind, and spirit in a way that neither rejects alternative approaches nor accepts any of them uncritically.

Assessing Competence to Consent to Treatment - Thomas Grisso 1998

The book explains how assessments should be conducted and offers detailed, practice-tested interview guidelines to assist medical practitioners in this task. Numerous case studies illustrate real-life applications of the concepts and methods discussed. Grisso and Appelbaum also explore

the often difficult process of making judgments about competence and describe what to do when patients' capacities are limited."

Structured Oral Examination Practice for the Final FRCA - Rakesh Tandon 2011-11-17

Structured Oral Examination Practice for the Final FRCA offers well-researched, relevant, and carefully constructed questions with evidence-based answers. The book specifically addresses the new clinical emphasis in the FRCA examination, giving candidates an insight into the way the viva works, offering general guidance on examination techniques, and providing readily accessible information relating to a wide range of potential questions. The book is organized into 16 chapters, each

offering trainees and trainers complete examinations as in the real structured oral examination, covering around 70 relevant topics. Each chapter includes clinical anaesthesia and basic science broadly organized into the six areas covered by the exam: long-cases, short-cases, applied anatomy, physiology, pharmacology and clinical measurement. The book also includes a hot topics chapter addressing recent advances beloved of examiners.

Risk and Reasoning in Clinical Diagnosis - Cym Anthony Ryle 2019-07-12
Accurate diagnosis is the foundation of medical practice, but at the start of the diagnostic process, uncertainty is inevitable. The clinician's skills and cognitive attributes

determine the quality of the initial differential diagnosis and thus the crucial first phases of investigation and treatment; mistakes are often self-propagating. Diagnostic error is a major cause of avoidable morbidity and mortality, and is the commonest reason for successful litigation. *Risk and Reasoning in Clinical Diagnosis* is an accessible and readable look at the diagnostic process. Dr. Cym Ryle presents the insights and concepts developed in cognitive psychology which have led to the consensus that in all domains human reasoning is primarily driven by unconscious, intuitive mechanisms; the contribution of structured, analytical thinking is variable and inconsistent. He notes that the risk of error is inseparable from these mechanisms. Dr.

Ryle then develops a description of the diagnostic process which encompasses its form, strengths and fallibility, and illustrates this description with examples from his work as a general practitioner. He argues that improving diagnostic accuracy should be a priority, and that there is sufficient evidence to guide changes in medical training, in clinical practice, and in the culture and organisation of our institutions. He identifies specific, practical steps that can be taken by individual clinicians and by clinical teams, suggests priorities for action in our institutions, and considers the obstacles to progress.

Clinical Medicine For The Mrcp Paces; - Gautam Mehta 2011-07-01

Healing Self-Injury -

Janis Whitlock

2019-01-03

Subtle scars

disappearing up a shirt sleeve, unexplained

bruises, burn marks. As

many as one out of every four young people engage

in non-suicidal self-

injury, defined as the

deliberate destruction

of body tissue without

suicidal intent. Parents

who uncover this

alarming behavior are

gripped by uncertainty

and flooded with

questions--why is my

child doing this? Is

this a suicide attempt?

What did I do wrong?

What can I do to stop

it? And yet basic

educational resources

for parents with self-

injuring children are

sorely lacking. Healing

Self-Injury provides

desperately-needed

guidance to parents and

others who love a young

person struggling with

self-injury. First and

foremost, adolescent psychologists Janis Whitlock and Elizabeth Lloyd-Richardson believe that parents must appreciate how important their role is in their child's recovery; there is a lot that parents can do to support their self-injuring children. This book offers strategies for identifying and alleviating sources of distress in children's lives, improving family communication (particularly around emotions), and seeking professional help. Importantly, it also provides compassionate advice to parents with personal challenges of their own, explaining how these can impact the entire family. The book will help parents partner with their children to identify, build, and use skills that will assist them in recovering from self-

injury. Vivid anecdotes drawn from the authors' extensive in-depth interviews with real families in recovery from self-injury put a human face on what for many families is a distressing and often isolating experience. *Healing Self-Injury* is a must-have for parents who want to assist in their child's recovery, as well as for anyone who lives with, works with, or cares about self-injuring youth and their families.

Clinical Neurology - Graeme Hankey 2008-02-01
Neurology is an exciting

and evolving clinical science. The fact that many previously untreatable diseases are now known to be not only treatable, but preventable, has raised new optimism for the probability that treatments will emerge for other currently incurable neurologic disorders. This book is written and illustrated for students of clinical **EMQs for the MRCS** - Sri G. Thrumurthy 2013-01-24 Specifically designed to help candidates revise for the MRCS exam, this book features 250 extended matching questions divided into 96 themes, covering the whole syllabus. Containing everything candidates need to pass the MRCS Part A EMQ section of the exam, the book focuses intensively on topics relating to principles of surgery-in-general, including peri-operative care,

post-operative management and critical care, surgical technique and technology, management and legal issues in surgery, clinical microbiology, emergency medicine and trauma management, and principles of surgical oncology. The high level of detail included within the questions and their explanations allows effective self-assessment of knowledge and quick identification of key areas requiring further attention. Varying approaches to extended matching questions are used, giving effective exam practice and guidance through revision and exam technique. This includes clinical case questions, positively-worded questions, requiring selection of the most appropriate of relatively correct answers; 'two-step' or 'double-jump' questions,

requiring several cognitive steps to arrive at the correct answer; as well as factual recall questions, prompting basic recall of facts.

The Pocketbook for PACES

- Rupa Bessant

2012-05-31

Difficult Conversations in Medicine - Elisabeth Macdonald 2004

In all branches of medicine, effective communication between health care professionals and patients, families and carers is essential to ensure first-class treatment. Increasing public awareness of health issues and the ready availability of health information have lead the public to be morewidely informed about common conditions and the treatments available. Patients therefore attend a medical consultation better informed so the need for improved communication skills is even greater. This book aims to demystify the 'doctor-patient' relationship in order that patients and potentialpatients can more easily understand the information which doctors are seeking to convey as well as gaining some insight

into the difficulties of communication from a doctor's perspective. Some conversations require specialised skills. Talking to people with difficult personalities and poor social skills can be challenging. Strong emotions of anger, frustration or distress need sensitive handling and particular age groups call on styles of address appropriate to their particular needs. Using the expertise of experienced doctors from many specialties this book covers not only the theory behind good communication skills but also gives a wealth of practical advice. The book covers ethical and legal issues, planning difficult conversations, the patient's and doctor's perspectives, issues surrounding special groups such as children and the

elderly, and conversations with patients from different cultural backgrounds. Outlines of possible clinical cases posing specific problems are included with guidance on how to handle them.

PACES for the MRCP - Tim Hall 2008

This title is written for MRCP candidates preparing for PACES exam in UK and rest of world. Clinical examinations in the OSCE style of marked stations are daunting for all students, whether undergraduates or MRCP candidates. The recent introduction of the 5-station PACES (Progressive Assessment of Clinical Examination Skills) exam inspired a

great deal of apprehension, so the appearance of the first edition of Hall's PACES for MRCP was greatly welcomed by candidates and became an immediate success. This new edition builds on the book's reputation. It provides, in one colourful and attractive volume, complete coverage of all the most common medical cases that will be covered in PACES and similar exams. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam - respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer

approach at the end of each case - excellent preparation for the exam
Boxed tips highlight vital information - helps identify what is most important to remember
Produced in full colour throughout
Colour coding for each station
Many more illustrations added - now over 300 clinical photographs and line drawings in colour
Many more cases added, bringing the number up to 250 - 50 per station
History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

Basic Sciences for Core Medical Training and the MRCP - Neil Herring

2015-10-29

Providing a clear explanation of the relevant medical science behind the individual medical specialties, Basic Science for Core Medical Training and the MRCP, is an indispensable part of a candidate's MRCP preparation. Directly linked to the Royal College exam, the book follows the same systems-based approach as the syllabus for accurate and effective revision. With full coverage of basic

science for the medical specialities, the book features material on genetics, cellular, molecular and membrane biology, and biochemistry. Content is presented in an illustrated and easy-to-read format, ensuring that the basic science for each medical specialty is more approachable and accessible. A focus on how the basic sciences aid understanding of clinical practice is reinforced through key tables of differential diagnoses and pharmacology. Ten multiple choice questions at the end of each chapter consolidate learning and enable candidates to test their knowledge. The book also covers common examination errors and areas of misunderstanding to aid learning and help candidates avoid common

pitfalls.

Medicine for MRCP - Rupa Bessant 2020-08-17

Medicine for MRCP provides a comprehensive review of the material that you need to pass the MRCP Parts 1 and 2 written papers. The twenty-seven chapters mapped out to the RCP syllabus, cover all areas from molecular medicine and genetics, through to medical law and ethics. Written by specialist contributors and educational experts, the content is carefully crafted to build your understanding for both papers. Each chapter begins with the basic science required for Part 1, before covering clinical medicine for Part 1, Part 2 and the PACES examinations. To ensure effective revision, material is presented in short sections with bullet lists, tables, and boxes. Over 150 drawings

and photos illustrate key principles and clinical topics making them easier to retain. References to evidence-based protocols and directions to further reading allow for deeper understanding.

Candidates can review their progress via the 180 end-of chapter self-assessment questions. Drawing on the authors' expertise, *Medicine for MRCP* is the ideal companion for the MRCP as well as a useful reference guide for practicing medical doctors.

THE MEDICAL AND SURGICAL ASPECTS OF AVIATION - H. GRAEME ANDERSON 1919

Get Through MRCP: PACES

- Rajeev Gulati

2013-05-08

Reflecting the latest exam developments and covering the entire syllabus, this book focuses on providing complete revision coverage for the PACES exam. It is divided into five easy-to-use chapters, each representing a station from the exam, and integrates both the clinical and non-clinical aspects of the exam. It presents a wide range of commonly asked stations with detailed information laid out in a clear, concise manner, aided by photographs and diagrams.
