**Bone Health and
Osteoporosis** - United
States Public Health
Service 2004-12

This first-ever Surgeon
General's Report on bone
health and osteoporosis
illustrates the large
burden that bone disease
places on our Nation and
its citizens. Like other
chronic diseases that
disproportionately
affect the elderly, the
prevalence of bone
disease and fractures is
projected to increase
markedly as the
population ages. If
these predictions come
true, bone disease and
fractures will have a
tremendous negative
impact on the future
well-being of Americans.
But as this report makes
clear, they need not
come true: by working
together we can change
the picture of aging in
America. Osteoporosis,
fractures, and other
chronic diseases no
longer should be thought
of as an inevitable part
of growing old. By
focusing on prevention
and lifestyle changes,

including physical activity and nutrition, as well as early diagnosis and appropriate treatment, Americans can avoid much of the damaging impact of bone disease and other chronic diseases. This Surgeon General's Report brings together for the first time the scientific evidence related to the prevention, assessment, diagnosis, and treatment of bone disease. More importantly, it provides a framework for moving forward. The report will be another effective tool in educating Americans about how they can promote bone health throughout their lives. This first-ever Surgeon General's Report on bone health and osteoporosis provides much needed information on bone health, an often overlooked aspect of physical health. This report follows in the

tradition of previous Surgeon Generals' reports by identifying the relevant scientific data, rigorously evaluating and summarizing the evidence, and determining conclusions. **Ancient History Revision Guide** -
