*Second Language Acquisition in Action* - Andrea Nava 2018-03-22

Despite the key role played by second language acquisition (SLA) courses in linguistics, teacher education and language teaching degrees, participants often struggle to bridge the gap between SLA theories and their many applications in the classroom. In order to overcome the 'transfer' problem from theory to practice, Andrea Nava and Luciana Pedrazzini present SLA principles through the actions and words of teachers and learners. *Second Language Acquisition in Action* identifies eight important SLA principles and involves readers in an 'experiential' approach which enables them to explore these principles 'in action'. Each chapter is structured around three stages: experience and reflection; conceptualisation; and restructuring and planning. Discussion questions and tasks represent the core of the book. These help readers in the process of 'experiencing' SLA

research and provide them with opportunities to try their hands at different areas of language teachers' professional expertise. Aimed at those on applied linguistics MA courses, TESOL/EFL trainees and in-service teachers, *Second Language Acquisition in Action* features:

- Key Questions at the start of each chapter
- Data-based tasks to foster reflection and to help bridge the gap between theory and practice
- Audiovisual extracts of lessons on an accompanying website

**An Introduction to Statistical Learning** -

Gareth James 2013-06-24

An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to

facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the authors co-wrote *The Elements of Statistical Learning* (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. An *Introduction to Statistical Learning* covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. **Language and Literature Teaching** - Christopher Brumfit 1985

*A Theoretical Framework for Language Education and Teaching* - Paolo E. Balboni 2018-07-26

Educational linguistics is transcultural, with research in the field adopting an international scope. Educational systems, on the contrary, are culture-bound. As a consequence, actual teaching differs across countries, and sometimes even among provinces, local educational authorities, and schools. However, a globalized world needs to share the various meanings of “knowing a language” and “teaching a language”, as language is the main factor of both cultural identity and national and international interaction. The framework offered here is built on eight “hypotheses”, logical models that provide the potential common core of a non-culture-bound theory of language education and of language teaching. The book thus suggests a common terminology, some common principles, and a basic paradigm to be shared in both theoretical and practical research in edu-linguistics, consequently going beyond the borders implied by such titles as European framework, American standards, and Chinese guidelines.
