Step-by-Step Lighting for Outdoor Portrait Photography - Jeff Smith 2014-04-15

There are many aspects to professional photography: composition, camera angles, exposure, color balance, posing, and lighting— just to name a few. However, while each of these aspects of photography is important in the creation of a professional portrait, lighting presents a special challenge that is part art and part science. When the two come together effectively, the results are stunning; when any one aspect of the recipe falls short, the result is a poor exposure or a downright unflattering look. On the artistic side of the scale, lighting is one of the primary tools for setting the mood of the portrait. It can communicate a sense of bright, airy ease or sharp, dramatic tension—or anything in between. Determining what look is right for the client (and for their intended use of the resulting portraits) is a key decision. From there, the photographer can begin to use light to sculpt the subject's features, minimizing problem areas or accentuating the subject's best features through the selection of light modifiers and the positioning of the lights themselves. Moving to the technical side, outdoor lighting present particular challenges—but also some significant advantages. Outdoors, photographers shoot at least partially with natural light. While this is (most of the day) an abundant light source, it is largely out of the control of the photographer. The light can change from moment to moment as clouds pass between the earth and sun. It also changes continually throughout the day as the sun moves across the sky. Since he can't completely control the light, the photographer must be prepared to adapt his subject's pose and position to create flattering results with the light as-is. Alternately, the photographer can "tweak" the lighting by augmenting the sunlight with flash or reflectors—or even softening it, using scrim or other diffusers. (Of course, this leaves another major concern: the background. Even if the light on the subject can be perfected, rarely can the photographer also control the light on an area as large as the background—making it a major concern in the process of posing and lighting.) So, given all this, why would any photographer choose to make portraits outside? One advantage is that the lighting and scenes are free—making outdoor photography a great starting point for those entering the field. Even established studios, however, have found that clients simply like the natural, timeless look of outdoor portraits. This makes them strong sellers. Additionally, most portrait subjects are more at ease in natural light than when seated in front of bright, noisy studio-flash units—and relaxed subjects translate into better expressions, and better overall portraits. In this book, Smith takes you through the process of lighting outdoor portraits from start to finish, covering both the artistic and technical aspects of achieving success. Short one- or two-page lessons are amply illustrated to guide the reader through each phase. In many cases, before and after images—or image sequences showing variations and alternative approaches—are presented to facilitate learning. Readers are encouraged to have this book with them during practice sessions and work on replicating or refining the provided examples, creating a self-study course in the art of lighting for outdoor portrait photography.

Classic Family Portraits - Ed Pedi 2014-06-10

To stand out in the crowded field of family portrait photography, one's photos must capture

feelings and convey heartfelt emotions. Ed Pedi has spent 20+ years in the business, honing his techniques and establishing himself as an award winning photographer. In this book, Pedi presents 60 of his finest images, detailing the setting and the technical aspects of the shoot. Each image is also accompanied by set-up shots and or diagrams. This collection provides a concise overview of the art of family portrait photography. Family portrait photography can mean many different things. From individual portraits of babies and children, to various groupings of family members all the way to 100 people family -reunion group portraits, there are many things a professional shooter needs to be prepared for. In fact, many shoots will include multiple setups with a changing roster of family members in different poses and settings. Being able to deftly maneuver all of this and keep everyone and everything under control and on task can seem quite daunting. Pedi breaks all of this down into simple and easy to enact tips and lessons. While skill and artistry are key to creating memorable portraits, actually selling prints is just as important to running a successful business. Photographing each family member and the children separately increases options for greater sales with multiple pictures to choose from. In a similar vein, larger groups (like the group of 28 that Pedi details in the book) can be photographed in multiple breakdowns. In the book he explains a number of these breakdowns, each which works as a way to increase sales from one session. Another key to long term success as a portrait photographer is the repeat client. Imagine photographing a child every few years, from newborn to high school graduation. Many families will have their family portraits taken every few years as their children grow or more children are born. Repeat clients are more than just clients, they are relationships built between the photographer and the families. These relationships allow families to trust the photographer, not just for the standard family portrait but for special occasions like graduations, family reunions or seasonal portraits. Crafting a portrait that clients will love is more than just simple posing. Lighting plays a huge role. Oftentimes, with large groups it is necessary to shoot outdoors. The author provides a number of creative lighting techniques for dealing with everything from the single child portrait to large outdoor setups. The author provides the metering lighting setups he used for many of his shots, taking special consideration for photographing large groups or shooting outdoors. Also important is composition and many times, the use of props. Pedi always has a number of potted plants and artificial rocks with him to use to spruce up a scene. Flowers can be used to subtly add color to the portrait or fill in dead space, while the rocks can be used as posing or seating objects. In this book Pedi provides examples from his 20+ years in the industry of how to create the emotional portraits that clients want. Not only will they want multiple photos from one shoot, they will want to hire you again and again for their ongoing portrait needs. Creating a relationship with your clients not only makes everyone more comfortable during a shoot but lets them know that they can trust you and expect a certain level of quality each time they need a photographer.

Photograph the Face - 2014-06-10

The most essential factor in creating a successful, salable portrait is properly lighting the face. But, every face is different, and, each face type requires a different style of lighting. It is imperative that the photographer realizes this. From the subjects' complexion and facial size, to their clothing, hair color and setting, there are many aspects to consider when lighting a client. The photographer must also take into consideration what type of product the client wants: senior portrait, bridal portrait, glamour or professional. Each one of these requires something different.

Properly and efficiently addressing all of these factors will set you and your business apart from the competition. In this book, Smith focuses on teaching photographers how to conceptualize and produce portraits that will please the client. He emphasizes that he is not creating his own artistic vision, but that he is crafting what the client wants. That is not to say the results aren't artful and creative. Both of those things are very important, as Smith shows, but the main goal as a successful professional photographer is to create portraits that the subject wants to buy. Smith advises photographers to be aware of a subject's self-image when creating the portrait, being sure not to light them in a manner that is unflattering or distorted. Success in creating salable portraits relies as much on understanding people and the way our self image functions as it does understanding the proper techniques of lighting. First, Smith discusses the differences between face types and what to be aware of when setting up the lighting for each. Proper metering and placement of light source are essential to controlling your highlights, your shadowing and the transition area in between. Establishing a system for modifying your lighting setup for each subject is emphasized. The concept of Camera Sight, or visualizing the finished photo ahead of time to look for potential problem areas, is very important. As Smith admits, this skill comes with experience. Where he once had to take many test shots to pick out these issues, he is now able to see them before he shoots a single frame. This is a skill that develops over time with training and practice. The author then explains the differences between shooting in a studio and shooting on location, both indoors and outdoors. Different equipment is required for each scenario, but the equipment used for shooting outdoors can even differ depending on the time of day. While the most ideal natural light occurs just after sunrise or just before sunset, most customers do not want to have their portraits taken at 5am or late in the day. So, the photographer needs to be prepared to shoot in the harsh midday sun. In addition to lighting the face, the photographer must find usable light to illuminate the background properly. Smith details the lighting system he uses for outdoor portraiture and presents it in the context of his shooting experiences. While studio shoots provide greater levels of comfort and consistency compared to a location shoot, there are still many things required to get that perfect shot. Properly applying fill, accent light and shadowing are just as important in the studio as they are on location. Understanding the concepts of traditional lighting allows the photographer to consistently create studio portraits that will please any customer. The most important part of the face to light properly is the eyes. Smith explains in detail what factors a successful photographer must consider to get the final portrait every client wants. Whether it is a difference in the size of the client's eyes or ears, asymmetrical lips, or a crooked nose, there are ways to light these to correct the differences. Using artistry and creative vision to adapt from the comfort of studio shoots to the complicated and diverse demands of location shoots, Smith provides the reader with the tools to capture what the client wants every time.
