Early Warning Systems and Targeted Interventions for Student Success in Online Courses - Glick, Danny 2020-06-26

Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation.

Despite the popularity of early warning systems, research on their design and implementation is sparse.

*Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.

Disaster Management - Alejandro Lopez-Carresi 2013-11-12

There is a perennial gap between theory and practice, between academia and active professionals in the field of disaster management. This gap means that valuable lessons are not learned and people die or suffer as a result. This book opens a dialogue between theory and practice. It offers vital lessons to practitioners from scholarship on natural hazards, disaster risk management and reduction and developments studies, opening up new insights in accessible language with practical applications. It also offers to academics the insights of the enormous experience practitioners have accumulated, highlighting gaps in research and challenging assumptions and theories against the reality of experience. Disaster Management covers issues in all phases of the disaster cycle: preparedness, prevention, response and recovery. It also addresses cross-cutting issues including political, economic and social factors that influence differential vulnerability, and key areas of practice such as vulnerability mapping, early warning, infrastructure protection, emergency management, reconstruction, health care and education, and gender issues. The team of international authors combine their years of experience in research and the field to offer vital lessons for practitioners, academics and students alike.

Transforming the Workforce for Children Birth Through Age 8 - National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress.

Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

**Improving Public Policy** - Fanie Cloete 2000

Handbook of Implementation Science for Psychology in Education - Barbara Kelly 2012-08-20

This book aims to help policy makers, stakeholders, practitioners, and teachers in psychology and education provide more effective interventions in educational contexts. It responds to disappointment and global concern about the failure to implement psychological and other interventions successfully in real-world contexts. Often interventions, carefully designed and trialed under controlled conditions, prove unpredictable or ineffective in uncontrolled, real-life situations. This book looks at why this is the case and pulls together evidence from a range of sources to create original frameworks and guidelines for effective implementation of interventions.

**The Project Administrator:** - Gerrit Van Der Waldt 2020

The application of projects in various organisational settings and for multiple purposes is accelerating at a rapid pace. Increasingly public and private sector institutions and enterprises appreciate the value of projects to render services and products on time, within budget and according to quality specifications. The ultimate success of projects is, however, dependent on the professional expertise of dedicated support staff. The role and responsibilities of project administrators are therefore rapidly growing to establish administrative support structures, systems and processes, as well as adequate project controls, document management, and stakeholder communication. Project host organisations, project managers and governance bodies, such as steering committees, need to be strongly supported to ensure that the hands of key role-players are strengthened through accurate record-keeping, archival services, project management information systems, control systems, and team support. For this purpose, organisational arrangements such as project management units, project support offices, and project management offices are established to facilitate institutional memory and to embed the principles of a learning organisation as far as project best practices are concerned. The body of knowledge of Project Management is also highly dynamic and is expanding to incorporate the exciting world of project support services. The purpose of this publication is to provide an overview of the nature of project support services with particular reference to the roles and responsibilities of project administrators. The publication covers the following key areas: the fundamentals of project management including concepts, principles, life cycle phases, PMBOK, and methodologies; the nature of project support services, including the typical job profile and responsibilities of project administrators; support through organisational and project governance arrangements; project planning support; project controls, reviews, and reporting support; and project team support and self-management. This publication is a must-read for project practitioners in the field of project support services and business administration, and also serves as an invaluable text book to train project support staff. Various self-assessment exercises and practical examples are included to aid this purpose.

Communication in Construction - Andrew Dainty 2007-01-24

Communication within project-based environments presents special challenges. This is especially true within the construction industry, where interaction tends to be characterised by unfamiliar groups of people coming together for short periods before disbanding to work on other endeavours. Many of the problems that develop in construction projects are a result of both the temporary and inter-disciplinary nature of project teams. This complicates an already problematic communication environment in which technical language, an adversarial culture and noise/distraction all combine to prevent

straightforward information flow from one party to another. This book examines communication at a number of levels, ranging from interpersonal interactions between project participants to corporate communication between organisations. Several non-typical perspectives on the process of communication are introduced, to encourage the reader to think about communication in a more innovative manner. The combination of differing perspectives illustrates the diversity of communication problems facing those working within project-based environments.; Practical guidance is provided on possible solutions to communication problems, and a number of examples and case studies are presented.

**Project Managers' Leadership Styles in Information Technology Sector of Pakistan** - Muhammad Khalique Ahmad  
2021-10-26

In these competitive and turbulent times, project organisations face severe challenges. Despite the advancement of project management tools and techniques, the rate of project failure exceeds that of success. Regardless of calls for further empirical studies on the role of project leadership, researchers struggle to find the best leadership styles for project success. New digital transformation phenomena have forced organisations to offer more autonomy and decision-making authority to those at lower hierarchical levels. In this scenario, top management support plays a facilitator role. To the best of the researcher's knowledge, no past studies have examined these critical project success factors simultaneously in a project environment. Embedded in the theories of contingency, goal-setting, and social cognition, this study raised the hypothesis that project managers' leadership styles impact project success via the mediation of goal clarity, empowerment, and self-leadership as well as the moderation of top management support. Data was collected by administering a cross-sectional survey to 289 project organisations in the IT sector. The results demonstrated that project managers' transactional leadership style does not impact project success because goal clarity has an insignificant association with project success. However, the transformational leadership style showed a positive impact on project success because empowerment significantly and positively relates to project success. The project manager's empowering leadership style was also found to positively influence project success through followers' self-leadership. Additionally, top management support revealed a significant moderating role by strengthening the relationship between

empowerment and project success. This study successfully fills theoretical gaps by introducing a novel moderated mediation model. The findings also offer useful insights to practitioners by revealing that project managers' transformational leadership and empowering leadership are needed to enhance and encourage employee empowerment and self-leadership, and ultimately secure project success.

**Eliminating the Public Health Problem of Hepatitis B and C in the United States** - National Academies of Sciences, Engineering, and Medicine 2016-07-01

Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the first of two, examines the feasibility of hepatitis B and C elimination in the United States and identifies critical success factors.

The phase two report will outline a strategy for meeting the elimination goals discussed in this report.

**Biological Threats and Terrorism** - Institute of Medicine  
2002-04-07

In the wake of September 11th and recent anthrax events, our nation's bioterrorism response capability has become an imminent priority for policymakers, researchers, public health officials, academia, and the private sector. In a three-day workshop, convened by the Institute of Medicine's Forum on Emerging Infections, experts from each of these communities came together to identify, clarify, and prioritize the next steps that need to be taken in order to prepare and strengthen bioterrorism response capabilities. From the

discussions, it became clear that of utmost urgency is the need to cast the issue of a response in an appropriate framework in order to attract the attention of Congress and the public in order to garner sufficient and sustainable support for such initiatives. No matter how the issue is cast, numerous workshop participants agreed that there are many gaps in the public health infrastructure and countermeasure capabilities that must be prioritized and addressed in order to assure a rapid and effective response to another bioterrorist attack.
