Context in Computing - Patrick Brézillon

2014-12-09

This volume explores how context has been and can be used in computing to model human behaviors, actions and communications as well as

to manage data and knowledge. It addresses context management and exploitation of context for sharing experience across domains. The book serves as a user-centric guide for readers wishing to develop context-based applications, as well as an intellectual reference on the concept of context. It provides a broad yet deep treatment of context in computing and related areas that depend heavily on computing. The coverage is broad because of its cross-disciplinary nature but treats topics at a sufficient depth to permit a reader to implement context in his/her computational endeavors. The volume addresses

how context can be integrated in software and systems and how it can be used in a computing environment. Furthermore, the use of context to represent the human dimension, individually as well as collectively is explained. Contributions also include descriptions of how context has been represented in formal as well as non-formal, structured approaches. The last section describes several human behavior representation paradigms based on the concept of context as its central representational element. The depth and breadth of this content is certain to provide useful as well as intellectually enriching information to readers

of diverse backgrounds who have an interest in or are intrigued by using context to assist in their representation of the real world.

Howard Zinn on Democratic Education - Howard Zinn
2016-01-08

Perhaps no other historian has had a more

profound and revolutionary impact on American education than Howard Zinn. This is the first book devoted to his views on education and its role in a democratic society. Howard Zinn on Democratic Education describes what is missing from school textbooks and in classrooms-and how we move beyond these deficiencies to improve student education. Critical skills of citizenship are insufficiently developed in schools, according to Zinn. Textbooks and curricula must be changed to transcend the recitation of received wisdom too common today in schools. In these respects, recent Bush Administration and educational

policies of most previous US presidents have been on the wrong track in meeting educational needs. This book seeks to redefine national goals at a time when public debates over education have never been more polarised--nor higher in public visibility and contentious debate. Zinn's essays on education-many never before published--are framed in this book by a dialogue between Zinn and Donald Macedo, a distinguished critic of literacy and schooling, whose books with Paulo Freire, Noam Chomsky

and other authors have received international acclaim.
