"[I]s psychopathy a brain disorder, as many scientists now claim? Or is it just a reflection of modern society's deepest fears? The Myth of the Born Criminal offers the first comprehensive critique of the concept of psychopathy from the eighteenth-century origins of the born-criminal theory to the latest neuroimaging, behavioural genetics, and statistical studies. Jarkko Jalava, Stephanie Griffiths, and Michael Maraun use their expertise in neuropsychology, psychometrics, and criminology to dispel the myth that psychopathy is a biologically-based condition. Deconstructing the emotive language with which both research scientists and reporters describe the psychopaths among us, they explain how the idea of psychopathy offers a comforting neurobiological solution to the mystery of evil"--Preliminary page.

Handbook on Sexual Violence - Jennifer M. Brown 2011-10-19

This book contextualizes the complexity of sexual violence within its broader context - from war to the resolution of interpersonal disputes - and covers a wide span including sexual harassment, bullying, rape and murder as well as domestic violence. Written by leading academics from a variety of disciplines, contributions also include commentaries that relate the research to the work of practitioners. Despite advances made in the investigation of sexual offences, evidence still points to a continued belief in the culpability of victims in their own victimization and a gap between the estimated incidence of sexual violence and the conviction of perpetrators. Adopting an implicitly and explicitly critical stance to contemporary policy responses that continue to fail in addressing this problem, this book focuses on attitudes and behaviour towards sexual violence from the point of view of the individual experiencing the violence - perpetrator and victim - and situates them within a broader societal frame. It is through an understanding of social processes and psychological mechanisms that underpin sexual violence that violence can be combated and harm reduced, and at this individual level that evidence-based interventions can be designed to change policy and practice. The Handbook is split into four sections: 'Legacies: Setting the Scene' offers a critical overview of historical, legal and cultural processes which help to explain the origins of current thinking and offer steers for future developments 'Theories and Concepts' examines contemporary thinking on sexual violence and reviews explanatory frameworks from a number of perspectives 'Acts of Sexual Violence' reviews a number of specific types of sexual violence, elaborating the range of circumstances, victims and perpetrators with a view to

addressing the general and pervasive nature of such violence thus contradicting narrow cultural stereotyping 'Responding to Sexual Violence' overviews and evaluates current policies and practices and offers new ideas to develop different types of interventions. The editors' conclusion not only draws out the key themes and ideas from contributions to the Handbook, but also considers the nature of and the extent to which any progress has been made in understanding and responding to sexual violence. This will be a key text for students and academics studying sexual violence and an essential reference tool for professionals working in the field including police officers, probation staff, lawyers and judges.

This book provides a focused and comprehensive overview of criminal psychology in different socio-economic and psycho-sociological contexts. It informs readers on the role of psychology in the various aspects of the criminal justice process, starting from the investigation of a crime to the rehabilitation or reintegration of the offender. It thoroughly addresses the bigger issues of holistically reducing the increase in crime rates and susceptibility in society. Each chapter builds on leading scholarship in this field from Western scholars and supplements these theories with research findings from a South Asian perspective, particularly in the Indian criminal justice system. The question of 'why' and 'how' certain individuals are drawn towards behaving in a way that contravenes the 'Law of the Land' is not an easy one to address. Researchers from various different fields have nevertheless attempted to develop theoretical explanations for the existence of different types of crime and why some individuals commit such acts. *Crime and Criminality* draws on criminology, sociology, psychology and neuroscience to offer a balanced perspective of crime, the criminal and criminality. Coverage includes: a comprehensive discussion of theoretical approaches to criminal behaviour, including biological, social and 'rational choice' approaches; an analysis of legal and social definitions of crime and how these definitions influence the way specific behaviours are labelled as criminal; an examination of different types of crime and criminals, from delinquents to 'psychopaths' and sex offenders; an exploration of different ways in which crime is predicted, including risk assessment and offender profiling and an overview of investigative techniques. Addressing a broad range of topics and offering a synthesis of competing theoretical explanations of criminality, this book is essential reading for students taking courses in criminology, criminal psychology, criminal behaviour, forensic psychology and psychological criminology.

An Introduction to Criminological Theory - Roger Hopkins Burke 2017-11-27

This book provides a comprehensive and up-to-date introduction to criminological theory for students taking courses in criminology at both undergraduate and postgraduate level. Building on previous editions, which broadened the debate on criminological theory, this book presents the latest research and theoretical developments. The text is divided into five parts, the first three of which address ideal type models of criminal behaviour: the rational actor, predestined actor and victimized actor models. Within these, the various criminological theories are located chronologically in the context of one of these different traditions, and the strengths and weaknesses of each theory and model are clearly identified. The fourth part of the book looks closely at more recent attempts to integrate theoretical elements from both within and across models of criminal behaviour, while the fifth part addresses a number of key recent concerns of criminology: postmodernism, cultural criminology, globalization and communitarianism. All major theoretical perspectives are considered, including: classical criminology, biological and psychological positivism, labelling theories, feminist criminology, critical criminology and left realism, social control theories, the risk society. The new edition also features comprehensive coverage of recent developments in criminology, including situation action theory, desistance theory, peacemaking criminology, Loïc Wacquant's thesis of the penal society, critical race theory and Southern theory. Social Psychology in Forensic Practice - Joel Harvey 2022-12-21

This book explores how different social psychology theories and concepts can be applied to practice. Considering theories from attribution theory to coercion theory, social identity theories to ostracism, the authors offer a greater understanding and appreciation of the ways in which social psychology can contribute to forensic practice. The book argues that social psychology is useful for carrying out assessments (including risk assessments), formulations, and interventions with clients in forensic settings, as well as for psychological consultation, training, and the development of services. These theories are also important when understanding multi-disciplinary and multi-agency working, staff-client relationships, and peer-to-peer relationships. Through illustrative composite case examples, taken from the authors' experiences in forensic settings, the chapters demonstrate effective ways to pursue a theoretically informed practice. Exploring a broad range of theories and a timely topic, Social Psychology in Forensic Practice will interest a wide readership including graduate and undergraduate students and researchers in criminology, sociology, and forensic, social and clinical psychology. It will also be of practical use to health professionals and non-health professionals working in forensic settings as well as policy makers and others commissioning forensic services.

Psychological Criminology - Richard Wortley 2011-04-12

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development); and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of crime. The analysis spans 100,000 years, from the evolutionary roots of criminal behaviour in the ancestral environments of early humans on the African savana, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory - 'explaining' crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology. Psychological Criminology highlights the contributions that psychological theory can make to the broader field of criminology; it will be of interest to students, academics, researchers and practitioners in both criminology and forensic psychology.

to' guide for forensic practitioners and researchers. It provides practitioners and researchers with grounding in the practical techniques appropriate for research in applied forensic settings. This includes knowledge and skills of the research process and the wide range of research methods (both quantitative and qualitative) being applied in this arena. The text provides a critical understanding of the problems, challenges and ethical issues which can arise and ideas for managing these. Specific attention is paid to empirical research within forensic populations and settings including researching vulnerable groups (e.g. offenders and the mentally ill in secure settings), evaluating treatment programmes, and the uses and problems of randomised control trials. The book is clearly structured, with each methodology chapter describing the background of the approach; the type of research questions addressed; design principles and issues; the types of analysis that can be utilised; strengths and limitations of the method; future directions and further sources of information. Through the inclusion of case studies and illustrative examples from forensic researchers and practitioners who have extensive experience of conducting applied research, this book tackles real-life problems typically faced by researchers and practitioners. Research in Practice for Forensic Professionals is an essential one-stop resource for practitioners (such as psychologists, nursing and medical staff, prison and probation workers, social workers, occupational therapists) who have an interest in research and in evaluating their own work and the services in which they work. It will also be of interest to students studying areas of applied research, such as forensic psychology or applied criminology and those teaching them.

Unlike in other theory texts, the chapters are arranged by level of explanation to help students understand how theories from different disciplines interact with each other as a foundation for many contemporary criminological theories. Authors Jon Heidt and Johannes Wheeldon have developed a seven-step model to identify key aspects of different theories including their historical and social context, base assumptions, scope, problem foci, terms/concepts, related research, and practical ramifications. Children, Families and Violence - Brian Howe 2008-09-15

This book examines the risk factors surrounding children at risk of experiencing and perpetrating violence, and looks at the positive role that children's rights can play in their protection. The authors propose that violence in childhood is not spontaneous: that children are raised to become violent in poorly functioning families and child-unfriendly environments. They may be exposed to toxic substances in utero, to maltreatment in infancy, to domestic violence or parental criminality as they grow up. Each of these risk factors is empirically linked with the

development of antisocial and aggressive behaviour, and each reflects a violation of children's rights to protection from maltreatment. The authors show how respecting children's rights and safeguarding them from exposure to violence can shift the balance between risk and protective factors and, as a result, reduce the incidence and severity of childhood violence. This book will be essential reading for professionals working in child protection or with young offenders, academics, students, practitioners and policy-makers.

The Psychology of Restorative Justice - Theo Gavrielides 2016-02-24

This ground-breaking collection dares to take the next step in the advancement of an autonomous, inter-disciplinary restorative justice field of study. It brings together criminology, social psychology, legal theory, neuroscience, affect-script psychology, sociology, forensic mental health, political sciences, psychology and positive psychology to articulate for the first time a psychological concept of restorative justice. To this end, the book studies the power structures of the restorative justice movement, the very psychology, motivations and emotions of the practitioners who implement it as well as the drivers of its theoreticians and researchers.

Furthermore, it examines the strengths and weakness of our own societies and the communities that are called to participate as parties in restorative justice. Their own biases, hunger for power and control, fears and hopes are investigated. The psychology and dynamics between those it aims to reach as well as those who are funding it, including policy makers and politicians, are looked into. All these questions lead to creating an understanding of the psychology of restorative justice. The book is essential reading for academics, researchers, policymakers, practitioners and campaigners.

Important though these analyses are, this book focuses not so much on the changing nature of institutions and systems, but rather the changing nature of penal practice and practitioners Bringing together leading researchers from around the world, this collection unites studies that aim to describe and critically analyse penal practice with studies that investigate its effectiveness and prescribe its future development. Reversing penology's usual preoccupation with the prison, the book focuses mainly on penal practice in the community (i.e.

on probation, parole, offender supervision and 'community corrections'). The first part of the book focuses on understanding practice and practitioners, exploring how changing social, cultural, political, and organisational contexts influence practice, and how training, development, professional socialisation and other factors influence practitioners. The second part is concerned with how practitioners can be best supported to develop the skills and approaches that seem most likely to generate positive impacts. It contains accounts of new practice models and approaches, as well as reports of research projects seeking both to discover and to encourage effective practices. This book explores internationally significant and cutting-edge theoretical and empirical work on the cultures, practices, roles and impacts of frontline practitioners in delivering penal sanctions. As such, it will be of interest to researchers in criminology, social work and social policy as well as correctional policy makers and those involved in community supervision.
