**Medical Books and Serials in Print - 1984**

***Health Care - Jurrit Bergsma 1982***

Calling on the methodology of psychology, the authors explore the way illness alters the self-image of the sick person, and the way the experience changes the person who is ill. The reader is taken through the psychological impacts of the first clinical moment when the patient realizes he or she is in the altered state of illness,

as well as the subsequent effects of pain, hospitalization, being bed-ridden, fatigued or disabled. The central thesis is that an integral picture of medicine must include social-cultural aspects, the institutionalization of health care, and an attempt to provide patient-centered care. The approach taken is the empirically based psychosocial reflection of the disturbances to a person's self-image caused by various kinds of illness. Focusing on the world of the patient, the authors relate to problems concerning self-image, pain, exhaustion, isolation, handicaps, aging, dying and death. The relationships between patients and medical personnel are also examined. Concluding the work is an excellent bibliography keyed to the chapters of the text.

**Promoting Self-Management of Chronic Health Conditions** - Erin Martz 2017-07-18

It is common for a doctor or healthcare professional to see an individual with a chronic health condition only a few times a year for a brief office appointment. Yet, the individual has to live with the health condition 24 hours a day, 7 days a week. So, who really is in charge of managing the health condition? The individual has to "micro-manage" their condition, while healthcare professionals can provide advice on treatment approaches or the "macro-management" of the chronic health condition. **Promoting Self-Management of Chronic Health Conditions** covers a range of topics related to self-management-theories and practice, interventions that have been scientifically tested, and information that individuals with specific conditions should know (or be taught by healthcare professionals). Data suggest that currently a majority of individuals in the U.S. has a chronic health condition, and as society ages and healthcare continues to improve individuals' life-spans, more people will experience a chronic health condition. Health systems need to shift from an acute care model of treatment to a chronic care treatment model, in view of this trend. The expanding need for the development and scientific analysis of formal self-management programs accompany this increase in chronic

health conditions. This book serves the critical purpose of helping to increase understanding of self-management and how healthcare providers can empower individuals with chronic health conditions to self-manage.
