Economics of Land Degradation and Improvement - A Global Assessment for Sustainable Development - Ephraim Nkonya 2015-11-11

This volume deals with land degradation, which is occurring in almost all terrestrial biomes and agro-ecologies, in both low and high income countries and is stretching to about 30% of the total global land area. About three billion people reside in these degraded lands. However, the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources. The annual global cost of land degradation due to land use and cover change (LUCC) and lower cropland and rangeland productivity is

estimated to be about 300 billion USD. Sub-Saharan Africa (SSA) accounts for the largest share (22%) of the total global cost of land degradation. Only about 38% of the cost of land degradation due to LUCC - which accounts for 78% of the US\$300 billion loss - is borne by land users and the remaining share (62%) is borne by consumers of ecosystem services off the farm. The results in this volume indicate that reversing land degradation trends makes both economic sense, and has multiple social and environmental benefits. On average, one US dollar investment into restoration of degraded land returns five US dollars. The findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands, including through such institutional and policy measures as strengthening community participation for sustainable land management, enhancing government effectiveness and rule of law, improving access to markets and rural services, and securing land tenure. The assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified. In this regard, the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and related efforts to address land degradation and halt biodiversity loss.

Foundation Design - Allan Hodgkinson 2013-08-30

Foundation Design discusses fundamental concepts in the design of foundations. As with the author's previous work, the AJ Handbook of Building Structure, the emphasis is on practical matters and, while every architect may not aspire to more complicated designs, with the aid of this book he will be able to talk with more authority to his engineer. The book begins with an introduction to the properties rocks and soils, including sands and gravels, clays, and silts and peat. This is followed by discussions of the site investigation process, soil mechanics, and the principles of foundation design. Separate chapters cover foundation types (spread foundations and piles); foundation hazards and construction problems; and underpinning. Examples of foundation design are presented, such as simple bases, a column on the edge of a building, and examples of piling. The final two chapters discuss specifications for mass bases, reinforced pads, and trench foundations and pile caps; information to be given when inviting piling tenders; and the supervision of site works.

System Identification - R. Isermann 2014-05-23

System Identification is a special section of the International Federation of Automatic Control (IFAC)-Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification. Topics include modeling and identification; step response and frequency response methods; correlation methods; least squares parameter estimation; and maximum likelihood and prediction error methods. After analyzing the basic ideas concerning the parameter estimation methods, the book elaborates on the asymptotic properties of these methods, and then investigates the application of the methods to particular model structures. The text then discusses the practical aspects of process identification, which includes the usual, general procedures for process identification; selection of input signals and sampling time; offline and on-line identification; comparison of parameter estimation methods; data filtering; model order testing; and model verification. Computer program packages are also discussed. This compilation of tutorial papers aims to introduce the newcomers and non-specialists in this field to some of the basic methods and procedures used for system identification.

Enabling America is a major analysis of the field of rehabilitation science and engineering. The book explains how to achieve recognition for this evolving field of study, how to set priorities, and how to improve the organization and administration of the numerous federal research programs in this area. The committee introduces the "enabling-disability process" model, which enhances the concepts of disability and rehabilitation, and reviews what is known and what research priorities are emerging in the areas of: Pathology and impairment, including differences between children and adults. Functional limitations "in a person's ability to eat or walk, for example. Disability as the interaction between a person's pathologies, impairments, and functional limitations and the surrounding physical and social environments. This landmark volume will be of special interest to anyone involved in rehabilitation science and engineering: federal policymakers, rehabilitation practitioners and administrators, researchers, and advocates for persons with disabilities.

Island of the Lost - Joan Druett 2019-08-06

"Riveting." -The New York Times Book Review Hundreds of miles from civilization, two ships wreck on opposite ends of the same deserted island in this true story of human nature at its best—and at its worst. It is 1864, and Captain Thomas Musgrave's schooner, the Grafton, has just wrecked on Auckland Island, a forbidding piece of land 285 miles south of New Zealand. Battered by year-round freezing rain and constant winds, it is one of the most inhospitable places on earth. To be shipwrecked there means almost certain death. Incredibly, at the same time on the opposite end of the island, another ship runs aground during a storm. Separated by only twenty miles and the island's treacherous, impassable cliffs, the crews of the Grafton and the Invercauld face the same fate. And yet where the Invercauld's crew turns inward on itself, fighting, starving, and even turning to cannibalism, Musgrave's crew bands together to build a cabin and a forge—and eventually, to find a way to escape. Using the survivors' journals and historical records, award-winning maritime historian Joan Druett brings to life this extraordinary untold story about leadership and the fine line between order and chaos. *Standard Specifications for Highway and Structure Construction* - Wisconsin. The Players Ball - David Kushner 2020-04-21

"An engrossing microcosm of the internet's Wild West years" (Kirkus Reviews), award-winning journalist David Kushner tells the incredible battle between the founder of Match.com and the con man who swindled him out of the website Sex.com, resulting in an all-out war for control for what still powers the internet today: love and sex. In 1994, visionary entrepreneur Gary Kremen used a \$2,500 loan to create the first online dating service, Match.com. Only five percent of Americans were using the internet at the time, and even fewer were looking online for love. He quickly bought the Sex.com domain too, betting the combination of love and sex would help propel the internet into the mainstream. Imagine Kremen's surprise when he learned that someone named Stephen Michael Cohen had stolen the rights to Sex.com and was already making millions that Kremen would never see. Thus follows the wild true story of Kremen's and Cohen's decade-long battle for control. In *The Players Ball*, author and journalist David Kushner provides a front seat to these must-read Wild West years online, when innovators and outlaws battled for power and money. This cat-and-mouse game between a genius and a con man changed the way people connect forever, and is key to understanding the rise and future of the online world. "Kushner delivers a fast-paced, raunchy tale of sex, drugs, and dial-up." -Publishers Weekly

Steel-concrete Composite Bridges - David Collings 2005
