Cost Management of Construction Projects - Donald Towey
2013-06-12

The cost manager/quantity surveyor plays a pivotal role in the financial and contract management of construction projects, although the exact nature of the service they provide depends on the project employer's terms of engagement. This can mean acting as consultant in a range of roles including cost and advisory services for budget setting to initiate a project, cost management through the design and construction phases, contract administration and acting as the client side project manager to oversee the entire building process. Cost Management of Construction Projects focusses on the cost manager/quantity surveyor engaged by the project client, and discusses key elements that help drive project success including measurement (based on the New Rules of Measurement published by RICS), procurement, cost planning, contract administration and project cost management. With examples, it provides a thorough guide to the role in the workplace and in the field, directly addressing the day to day situations faced by the cost manager/quantity surveyor. Donald Towey MRICS has

extensive experience of the construction industry. His experience began as an estimator with a glass/glazing contractor in Manchester. Following a number of positions with UK contractors he relocated to Australia and has worked with a number of developers and main contractors, as well as doing freelance work. He is currently working in contracts management in Sydney.

Willis's Elements of Quantity Surveying - Sandra Lee 2011-03-01
Willis's Elements of Quantity Surveying has become a standard text in the teaching of building measurement – a core part of the curriculum for quantity surveyors. Particularly in the latter editions it has eclipsed the other books on building measurement, partly because of the heritage, but mostly because of the logical approach and copious use of examples to guide the student. The new 11th edition has been fully updated to recognise the introduction of the New Rules of Measurement (NRM) by the Royal Institution of Chartered Surveyors (RICS), which reflect the way the modern QS works and provide a standard set of measurement rules that are understandable by all those involved in a construction project. Key features: First published in 1935, has been used by many generations of quantity surveyors and lecturers New edition fully updated to include the RICS new rules of measurement (NRM) Many examples updated to reflect

current QS practice Revisers have extensive experience of teaching the subject through College of Estate Management courses

BIM and Quantity Surveying - Steve Pittard 2017-07-14

The sudden arrival of Building Information Modelling (BIM) as a key part of the building industry is redefining the roles and working practices of its stakeholders. Many clients, designers, contractors, quantity surveyors, and building managers are still finding their feet in an industry where BIM compliance can bring great rewards. This guide is designed to help quantity surveying practitioners and students understand what BIM means for them, and how they should prepare to work successfully on BIM compliant projects. The case studies show how firms at the forefront of this technology have integrated core quantity surveying responsibilities like cost estimating, tendering, and development appraisal into high profile BIM projects. In addition to this, the implications for project management, facilities management, contract administration and dispute resolution are also explored through case studies, making this a highly valuable guide for those in a range of construction project management roles. Featuring a chapter describing how the role of the quantity surveyor is likely to permanently shift as a result of this

development, as well as descriptions of tools used, this covers both the organisational and practical aspects of a crucial topic.

Professional Ethics for Construction and Surveying - Greg Watts 2021

This textbook responds to the increasing demand for practical, industry aligned, ethical practices in quantity surveying, construction management and related AEC professions. Professional Ethics for Construction and Surveying addresses how existing ethical standards can be pragmatically applied to both private and contracting practice, with case studies aligned with the ethical requirements of the main professional bodies. After an introduction to ethics, the authors present real-world situations where the minimum legal and contractual requirements necessitate the combination of professional judgement and ethical decision-making. They outline how such situations arise, then address how decisions can and should be made that are in keeping with the moral, contractual and CSR requirements, with cases covering the building lifecycle from procurement to handover. Consequently, the book brings together ethical theory,

existing worldwide ethical standards and the requirements of the RICS, the CIOB and the ICES, with the authors' experiences of examining candidates for entry into the professional bodies. The result is a professionally focused textbook aimed at vocational learners (at both undergraduate and postgraduate taught levels) and practitioners in construction, engineering, architecture and the wider built environment.

Construction Marketing - Richard Pettinger 1998-11-11

This book covers the whole range of marketing principles, skills and knowledge that the modern construction manager - from whatever discipline or profession within the industry - requires to generate effective and profitable business. While aimed primarily at students in the later years of degree, diploma and professional courses, it will also appeal to students in related disciplines and those following postgraduate and post-qualification courses. The approach underlines the importance of adopting a proactive attitude towards the marketing of a company's services in the construction industry. It reflects the reality of the transformation that has taken place over the past twenty years where there has been a shift from a highly protected domestic industry to an unprotected global industry. The already huge and increasing

pool of expertise in the field means that there is much greater choice available to clients and potential clients. The choice of contractor is therefore going to be made increasingly on the basis of factors other than pure expertise. Therein lies the importance of marketing. Factors such as price, quality, value, volume, time, client satisfaction and confidence all come into play - and these are presented and differentiated through marketing. The book covers all the principles of marketing, including strategy, marketing campaigns, product and service, price, promotion, access and research. It also deals with client perceptions, confidence, expectations and understanding. The critical question of operating in a fully globalised industry is also addressed.
