Community Pharmacy - Paul Rutter 2016-12-03

Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. *Community Pharmacy* is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features Guidance for arriving at a differential diagnosis Practical prescribing tips Trigger points for referral boxes Other hints and tips boxes Specific questions to ask boxes Case studies Self-assessment questions Consistent approach gives: Anatomy overview History taking and physical examination Prevalence and epidemiology Aetiology Arriving at a differential diagnosis Clinical features Conditions to eliminate Likely causes Unlikely causes Very unlikely causes Evidence base for OTC medicine Practical prescribing and product selection More on the examination of eyes, ears and mouth New sections on future-proofing (vaccinations etc.) New material covering inter-professional education for clinical skills. Molecular Pharmacology - John Dickenson 2012-11-30

This textbook provides a fresh, comprehensive and accessible introduction to the rapidly expanding field of molecular pharmacology. Adopting a drug target-based, rather than the traditional organ/system based, approach this innovative guide reflects the current advances and research trend towards molecular based drug design, derived from a detailed understanding of chemical responses in the body. Drugs are then tailored to fit a treatment profile, rather than the traditional method of 'trial and error' drug discovery which focuses on testing chemicals on animals or cell cultures and matching their effects to treatments. Providing an invaluable resource for advanced under-graduate and MSc/PhD students, new researchers to the field and practitioners for continuing professional development, *Molecular Pharmacology* explores; recent advances and developments in the four major human drug target families (G-protein coupled receptors, ion channels, nuclear receptors and transporters), cloning of drug targets, transgenic animal technology, gene therapy, pharmacogenomics and looks at the role of calcium in the cell. Current - focuses on cutting edge techniques and approaches, including new methods to quantify biological activities in different systems and ways to interpret and understand pharmacological data. Cutting Edge - highlights advances in pharmacogenomics and explores how an individual's genetic makeup influences their response to therapeutic drugs and the potential for harmful side effects. Applied - includes numerous, real-world examples and a detailed case-study based chapter which looks at current and possible future treatment strategies for cystic fibrosis. This case study considers the relative merits of both drug therapy for specific classes of mutation and gene therapy to correct the underlying defect. Accessible - contains a comprehensive glossary, suggestions for further reading at the end of each chapter and an associated website that provides a complete set of figures from within the book.

Pharmacology - Joanne I. Moore 2012-12-06

More than ten years ago, the faculty members of the Department of Pharmacology at the University of Oklahoma College of Medicine developed a review book of medical pharmacology in response to requests from our second year medical students who were preparing to sit for the Part I examination of the National Board of Medical Examiners. The students expressed a need for an organized approach to cope with the volume of basic science curricular material presented during the first two years. Therefore, our review book was not designed to provide a comprehensive text on pharmacology, but rather to provide the students with a significant core of information, as a refresher, after they had successfully completed a basic course in pharmacology. This book represents a major revision of our review of medical pharmacology. The book has been reorganized, updated and expanded to provide current information on major new drugs and information on older drug groups that typically are covered on licensure examinations. The book also has been expanded to include a large number of new questions for self-examination. The faculty have endeavored to retain a reasonably concise, relevant and readable review book that will provide the students with a thorough review of pharmacology. Students are advised to refer to comprehensive textbooks, as needed, to fill in any gaps in their knowledge which may be disclosed by the self-examinations.

The Top 100 Drugs - Andrew Hitchings 2018-10-25

Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.
