**Combustion Engineering, Second  
Edition** - Kenneth W. Ragland  
2011-06-15

Combustion Engineering,  
Second Edition maintains the  
same goal as the original: to  
present the fundamentals of  
combustion science with  
application to today's energy  
challenges. Using combustion  
applications to reinforce the  
fundamentals of combustion

science, this text provides a  
uniquely accessible introduction  
to combustion for  
undergraduate students, first-  
year graduate students, and  
professionals in the workplace.

Combustion is a critical issue  
impacting energy utilization,  
sustainability, and climate  
change. The challenge is to  
design safe and efficient  
combustion systems for many  
types of fuels in a way that  
protects the environment and  
enables sustainable lifestyles.

Emphasizing the use of  
combustion fundamentals in the  
engineering and design of  
combustion systems, this text  
provides detailed coverage of  
gaseous, liquid and solid fuel

combustion, including focused coverage of biomass combustion, which will be invaluable to new entrants to the field. Eight chapters address the fundamentals of combustion, including fuels, thermodynamics, chemical kinetics, flames, detonations, sprays, and solid fuel combustion mechanisms. Eight additional chapters apply these fundamentals to furnaces, spark ignition and diesel engines, gas turbines, and suspension burning, fixed bed combustion, and fluidized bed combustion of solid fuels. Presenting a renewed emphasis on fundamentals and updated applications to illustrate the

latest trends relevant to combustion engineering, the authors provide a number of pedagogic features, including: Numerous tables with practical data and formulae that link combustion fundamentals to engineering practice Concise presentation of mathematical methods with qualitative descriptions of their use Coverage of alternative and renewable fuel topics throughout the text Extensive example problems, chapter-end problems, and references These features and the overall fundamentals-to-practice nature of this book make it an ideal resource for undergraduate, first level graduate, or professional

training classes. Students and practitioners will find that it is an excellent introduction to meeting the crucial challenge of engineering sustainable combustion systems in a cost-effective manner. A solutions manual and additional teaching resources are available with qualifying course adoption.

**The Best of Peter Egan** - Peter Egan 2018-10-02

The Best of Peter Egan offers a “greatest hits” collection of Egan's motorcycle musings

from the past four decades, delivered in his signature, wise but amusing, style. Peter Egan's writing invites you to pull up a chair, pour a little scotch, and relax while he shares with you his tales from the road, his motorcycling philosophy, and his keen observations about the two-wheeled life. For some forty years, Peter Egan's columns and feature articles have been among Cycle World's most anticipated monthly content. Egan's legions of fans know they will gain a fresh perspective on motorcycling from each of his articles. Drawings from motoring artist Hector Cademartori beautifully illustrate Egan's musings, and a

foreword by super-enthusiast Jay Leno introduces the book. This is an unforgettable collection from a master writer whose simple adventures of two-wheeled life remind us why we love to ride.

**Scalextric** - Roger Gillham

2009-02-15

First published in 1981, this  
book has long been recognized  
as the 'bible of Scalextric',  
providing a complete catalogue  
of the cars and equipment  
produced. Now, for this seventh  
edition, the book has undergone  
a transformation, with a  
complete redesign and masses  
of new information about cars,  
sets and accessories produced  
around the world. As well as  
extra detail about earlier  
periods, there is full coverage of  
all the new Scalextric products

launched in the four years that  
have elapsed since the previous  
edition. Now containing nearly  
1,000 photographs, this book  
has become an extraordinarily  
detailed summary of everything  
in the world of Scalextric,  
written by an author who has  
been captivated by the subject  
for nearly 50 years.
