Atlas of CT Angiography - Gratian Dragoslav Miclaus
2014-06-26

This atlas presents normal and pathologic findings observed on CT angiography with 3D reconstruction in a diverse range of clinical applications, including the imaging of cerebral, carotid, thoracic, coronary, abdominal and peripheral vessels. The superb illustrations display the excellent anatomic detail obtained with CT angiography and depict the precise location of affected structures and lesion severity. Careful comparisons between normal imaging features and pathologic appearances will assist the reader in image interpretation and treatment planning and the described cases include some very rare pathologies. In addition, the technical principles of the modality are clearly explained and guidance provided on imaging protocols. This atlas will be of value both to those in training

and to more experienced practitioners within not only radiology but also cardiovascular surgery, neurosurgery, cardiology and neurology.

Methods for Multilevel Analysis and Visualisation of Geographical Networks - Céline Rozenblat 2013-06-03

This leading-edge study focuses on the latest techniques in analysing and representing the complex, multi-layered

data now available to geographers studying urban zones and their populations. The volume tracks the successful results of the SPANGEO Project, which was set up in 2005 to standardize, and share, the syncretic, multinational mapping techniques already developed by geographers and computer scientists. SPANGEO sought new and responsive ways of visualising urban geographical and social data that reflected the fine-grained detail of the inputs. It allowed for visual representation of the large and complex networks and flows which are such an integral feature of the dynamism of urban geography. SPANGEO developed through the 'visual analytics loop' in which geographers collaborated with computer scientists by feeding data into the design of visualisations that in turn spawned the urge to incorporate more varied data into the visualisation. This volume covers all the relevant aspects, from conceptual principles to the tools of network analysis and the actual results flowing from their deployment. Detailed case studies set out in this volume include spatial multi-level analyses of flows in airports and sea ports, as well as the fascinating scientific networks in European cities. The volume shows how the primary concern of geography—the interaction of society with physical space—has been revived by the complexities of new cartographical and statistical methodologies, which allow for highly detailed mapping and far more powerful computer analysis of spatial relationships.

Abu Tbeirah Excavations I. Area 1 - Licia Romano
2019-06-07

This book presents the results of the archaeological activities and specialistic studies carried out at the site of Abu Tbeirah (Nasiriyah, Province of Dhi Qar, southern Iraq) by the Iraqi-Italian joint mission of the

Iraqi State Board of Antiquities and Heritage and of Sapienza, led by F. D'Agostino and L. Romano (Dipartimento – Istituto Italiano di Studi Orientali). In the volume the accomplishments of the first seven campaigns (2011-2016) are introduced together with an assessment of the palaeo-environment and landscape surrounding the site. After an introduction to the reasons that led to start the archaeological activities in Abu Tbeirah, written by HE Dr A. Al-Hamdani, Minister of Culture of the Republic of Iraq, the diggings in the south-eastern Area 1 are presented (the cemetery and the other activities identified immediately under the top-soil and the last phase of Building A). A preliminary assessment on the Early-Dynastic III/Akkadian Transition pottery horizon (2450-2150 BC) is presented as well. At the same time, the multifaceted analyses and studies, carried out on Abu Tbeirah's site and findings, are included in the volume.

The Second Automobile Revolution - M. Freyssenet
2009-04-30

The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties.

The Manifesto for Teaching Online - Sian Bayne
2020-09-15

An update to a provocative manifesto intended to serve as a platform for debate and as a resource and inspiration for those teaching in online environments. In 2011, a group of scholars associated with the Centre for Research in Digital Education at the University of Edinburgh released "The Manifesto for Teaching Online," a series of provocative statements intended to articulate their pedagogical philosophy. In the original manifesto and a 2016 update, the authors counter both the "impoverished" vision of education being advanced by corporate and governmental edtech and higher education's traditional view of online students and teachers as second-class citizens. The two versions of the manifesto were much discussed, shared, and debated. In this book, Siân Bayne, Peter Evans, Rory Ewins, Jeremy Knox, James Lamb, Hamish Macleod, Clara O'Shea, Jen Ross, Philippa Sheail and Christine Sinclair have expanded the text of the 2016 manifesto, revealing the sources and larger arguments behind the abbreviated provocations. The book groups the twenty-one statements ("Openness is neither neutral nor natural: it creates and depends on closures"; "Don't succumb to campus envy: we are the campus") into five thematic sections examining place and identity, politics and instrumentality, the primacy of text and the ethics of remixing, the way algorithms and analytics "recode" educational intent, and how surveillance culture can be resisted. Much like the original manifestos, this book is intended as a platform for debate, as a resource and inspiration for those teaching in online environments, and as a challenge to the techno-instrumentalism of current edtech approaches. In a teaching environment shaped by COVID-19, individuals and institutions will need to do some bold thinking in relation to resilience, access, teaching

quality, and inclusion.

The Transformation of the Armed Forces - Michele Nones 2014

Information technology (IT) has had, and will continue

to have, a deep impact on the defence sector. The most advanced countries, not only the U.S. but also France, Great Britain and Italy, over the past few years have undergone a transformation of their armed forces aimed at exploiting the strategic advantages of IT. The goal pursued in Europe, and also promoted by NATO, is Network Enabled Capability (NEC). That is combining equipment and soldiers, as well as different doctrinal, procedural, technical and organizational elements, into a single network to obtain their interaction in order to achieve substantial strategic superiority. In practice, this also occurs with a strong, efficient and secure telecommunications network, and through netcentric modernization of armed forces' capability and systems aimed at connecting them to the net. This research paper analyzes the military netcentric modernization and transformation programs - still in progress - in France, Britain and Italy, with special focus on the joint program led by the Italian army called "Forza NEC". Opportunities and challenges of "Forza NEC" have been considered according to the Italian armed force's requirements, developed during two decades of experience in international military operations, as well as in the light of the evolution of strategic doctrine at a European and transatlantic level. Particular attention has been devoted to the interaction between industry and the armed forces, and to the involvement of many Italian companies in different "Forza NEC" activities, as it represents one of the pillars of the procurement program.

Semiotics of Visual Language - Fernande Saint-Martin
1990-10-22

"... the details of Saint-Martin's argument contain a

wealth of penetrating observations from which anyone with a serious interest in visual communication will profit." -- Journal of Communication Saint-Martin elucidates a syntax of visual language that sheds new light on nonverbal language as a form of representation and communication. She describes the evolution of this language in the visual arts as well as its multiple uses in contemporary media. The result is a completely new approach for scholars and practitioners of the visual arts eager to decode the many forms of visual communication.

Sport, Public Broadcasting, and Cultural Citizenship - Jay Scherer 2013-08-15

This book examines the political debates over the access to live telecasts of sport in the digital broadcasting era. It outlines the broad theoretical debates, political positions and policy calculations over the provision of live, free-to-air telecasts of sport as a right of cultural citizenship. In so doing, the book provides a number of comparative case studies that explore these debates and issues in various global spaces.

Medical Humanities and Medical Education - Alan Bleakley
2015-03-02

The field of the medical humanities is developing rapidly, however, there has also been parallel concern from sceptics that the value of medical humanities educational interventions should be open to scrutiny and evidence. Just what is the impact of medical humanities provision upon the education of medical students? In an era of limited resources, is such provision worth the investment? This innovative text addresses these pressing questions, describes the contemporary territory comprising the medical humanities in medical education,

and explains how this field may be developed as a key medical education component for the future. Bleakley, a driving force of the international movement to establish the medical humanities as a core and integrated provision in the medical curriculum, proposes a model that requires collaboration between patients, artists, humanities scholars, doctors and other health professionals, in developing medical students' sensibility (clinical acumen based on close noticing) and sensitivity (ethical, professional and humane practice). In particular, this text focuses upon how medical humanities input into the curriculum can help to shape the identities of medical students as future doctors who are humane, caring, expressive and creative – whose work will be technically sound but considerably enhanced by their abilities to communicate well with patients and colleagues, to empathise, to be adaptive and innovative, and to act as 'medical citizens' in shaping a future medical culture as a model democracy where social justice is a key aspect of medicine. Making sense of the new wave of medical humanities in medical education scholarship that calls for a 'critical medical humanities', *Medical Humanities and Medical Education* incorporates a range of case studies and illustrative and practical examples to aid integrating medical humanities into the medical curriculum. It will be important reading for medical educators and others working with the medical education community, and all those interested in the medical humanities.

New Frontiers of the Automobile Industry - Alex Covarrubias V. 2019-11-28

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the

global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

Twelve Years a Slave - Solomon Northup 2021-01-01

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

A Successful Transformation? - Petr Pavlínek 2008-04-30

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book

examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

Psychoanalysis of Technoscience - Hub Zwart 2019-02-20

This book presents a psychoanalysis of technoscience. Basic concepts and methods developed by Freud, Jung, Bachelard and Lacan are applied to case histories (palaeoanthropology, classical conditioning, virology). Rather than by disinterested curiosity, technoscience is driven by desire, resistance and the will to control. Moreover, psychoanalysis focusses on primal scenes (Dubois' quest for the missing link, Pavlov's discovery of the conditioned reflex) and opts for triangulation: comparing technoscience to "different scenes" provided by novels, so that Dubois's work is compared to missing link novels by Verne and London and Pavlov's experiments with Skinner's *Walden Two*, while virology is studied through the lens of viral fiction.

Design and Modeling of Mechanical Systems - Mohamed Haddar 2013-03-12

The 5th International Congress on Design and Modeling of Mechanical Systems (CMSM) was held in Djerba, Tunisia on March 25-27, 2013 and followed four previous successful editions, which brought together international experts in the fields of design and modeling of mechanical systems, thus contributing to the exchange of information and skills and leading to a considerable progress in research among the participating teams. The

fifth edition of the congress (CMSM 2013), organized by the Unit of Mechanics, Modeling and Manufacturing (U2MP) of the National School of Engineers of Sfax, Tunisia, the Mechanical Engineering Laboratory (MBL) of the National School of Engineers of Monastir, Tunisia and the Mechanics Laboratory of Sousse (LMS) of the National School of Engineers of Sousse, Tunisia, saw a significant increase of the international participation. This edition brought together nearly 300 attendees who exposed their work on the following topics: mechatronics and robotics, dynamics of mechanical systems, fluid structure interaction and vibroacoustics, modeling and analysis of materials and structures, design and manufacturing of mechanical systems. This book is the proceedings of CMSM 2013 and contains a careful selection of high quality contributions, which were exposed during various sessions of the congress. The original articles presented here provide an overview of recent research advancements accomplished in the field mechanical engineering.

Shuffling Nags, Lame Ducks - László Bartosiewicz 2013-11-01

The analysis of animal bone assemblages from archaeological sites provides much valuable data concerning economic and husbandry practices in the past, as well as insights into cultural and symbolic or ritual activity. Animal palaeopathology can identify diseases in archaeozoological assemblages but little interest has been expressed in investigating and understanding the cultural aspects of the diseases identified. Such assemblages represent the cumulative effects of human attitudes, decisions and influences regarding the keeping, care, treatment, neglect and exploitation of animals which result in a range of conditions, non-

infectious diseases and injuries that can be recognised on ancient skeletal material. Additionally, ever since the domestication of a handful of animal species around 10,000 years ago, close physical proximity has been a mutual source of infectious disease and traumatic injury for humans and animals alike. *Shuffling Nags, Lambe Ducks* provides an invaluable guide to the investigation of trauma and disease in archaeozoological assemblages. It provides a clear methodological approach, and describes and explains the wide range of traumatic lesions, infections, diseases, inherited disorders and other pathological changes and anomalies that can be identified. In so doing, it explores the impact that "man-made" decisions have had on animals, including special aspects of culture that may be reflected in the treatment of diseased or injured animals often incorporating powerful symbolic or religious roles, and seeks to enhance our understanding of the relationship between man and beast in the past. Chapters include: · History of studying pathological animal remains · Differences between human and animal palaeopathology · Methodology · Growth, development and ageing · Traumatic lesions · Inflammatory diseases and bone · Pathological lesions in working animals · Diseases connected to the environment
