**One Health Case Studies** - Susan Cork 2016-11-14  
'One Health' refers to an interdisciplinary approach to solving complex problems at the interface of human and animal health and the wider ecosystem. It represents an integrated and collaborative approach and addresses diverse issues, such as the detection and management of emerging and re-emerging infectious and non-infectious diseases, food and water security,

food hygiene, and global trade. Many complex problems that we currently face must consider anthropogenic factors as well as climate change, environmental impact, international collaboration, tourism, the human-animal bond, economics, plant health, and a myriad of other factors. This book discusses complex concepts in One Health, such as preparedness planning, national level governance, inter-agency co-operation, climate

change, human activity in sensitive ecosystems, the global food trade and food safety, antimicrobial resistance, surveillance, and communication from policy level to practical application. The book uses real-world case studies from different geographical regions, ranging from Asia to the Arctic, different environments from the jungle to the oceans, and different species including bees, fish, domestic and wild animals and humans. The cases are prepared by experts with a diverse range of experience and provide a unique and fascinating on-the-ground approach to One Health topics in practice. One Health Case Studies is an ideal resource for students and practitioners in veterinary medicine, human medicine, public health, agriculture, wildlife management, ecosystem health, and environmental management. \*\*\* "The book contains an outstanding compilation of examples of one

health in action, and it may very well become the definitive textbook for learning and teaching the one-health concept. ...well referenced and has extensive graphics to help illustrate one-health concepts in action. It is an insightful, thought-provoking, and comprehensive piece of work that is well worth the price for any medical professional." --Journal of the American Veterinary Medical Association, Vol. 250, No. 12, June 2017 [Subject: Health Policy, Public Policy, Environmental Studies]

**Critique of Black Reason** -  
Achille Mbembe 2017-02-17  
In *Critique of Black Reason*  
eminent critic Achille Mbembe  
offers a capacious genealogy of  
the category of Blackness—from  
the Atlantic slave trade to the  
present—to critically reevaluate  
history, racism, and the future of  
humanity. Mbembe teases out  
the intellectual consequences of  
the reality that Europe is no  
longer the world's center of  
gravity while mapping the  
relations among colonialism,  
slavery, and contemporary  
financial and extractive capital.  
Tracing the conjunction of  
Blackness with the biological  
fiction of race, he theorizes Black  
reason as the collection of  
discourses and practices that  
equated Blackness with the  
nonhuman in order to uphold  
forms of oppression. Mbembe  
powerfully argues that this  
equation of Blackness with the  
nonhuman will serve as the  
template for all new forms of

exclusion. With *Critique of Black Reason*, Mbembe offers nothing less than a map of the world as it has been constituted through colonialism and racial thinking while providing the first glimpses of a more just future.

Insect pests are becoming a  
problem of ever-more biblical  
proportions. This new textbook  
collates a series of selected papers  
that attempt to address various  
fundamental components of area-  
wide insect pest control. Of  
special interest are the numerous  
papers on pilot and operational  
programs that pay special  
attention to practical problems

encountered during program implementation. It's a compilation of more than 60 papers authored by experts from more than 30 countries.

### *Biomethanization of the Organic Fraction of Municipal Solid*

*Wastes* - J. Mata-Alvarez

2002-08-31

Biomethanization of the Organic Fraction of Municipal Solid Wastes is a comprehensive introduction to both the fundamentals and the more practical aspects of the anaerobic digestion of organic solid wastes,

particularly those derived from households, that is, the organic fraction of municipal solid wastes (OFMSW). It can be used as a textbook for specialized courses and also as a guide for practitioners. In the first part, the book covers the relevant aspects of anaerobic digestion (AD) of organic wastes. The fundamentals and kinetic aspects of AD are reviewed with particular emphasis on the aspects related to solid wastes. This introduction is necessary to have a comprehensive view of the AD process and to understand the practical principles as well as the origin of possible problems arising from the management of the process. Chapter 2 emphasizes the role of kinetics in designing the reactor, paying special attention to existing models, particularly the dynamic ones. Through this introduction, it is intended to facilitate the technology transfer from laboratory or pilot plant experiences to full-scale process,

in order to implement improvements in current digesters. Laboratory methods are described for the analysis and optimization of reactor performance, such as methanogenic activity tests or experimental evaluation of the biodegradation kinetics of solid organic waste. The different reaction patterns applied to industrial reactors are outlined. Industrial reactors are classified in accordance with the system they use, pointing out advantages and limitations. Co-digestion, enabling the co-treatment of organic wastes of different origin in a more economically feasible way, is described in detail. Examples of co-digestion are given, with OFMSW as a base-substrate. Finally, full-scale co-digestion plants are discussed. Various types (mechanical, biological, physico-chemical) of pre-treatment to increase the biodegradability, and thus the yields of the process, are

reviewed in detail. The use of the fermentation products of anaerobic digesters for biological nutrient removal processes in wastewater treatment plants is described. This constitutes an example of integrated waste management, a field in which both economic and technical advances can be achieved. Balances are given to justify the approach, and a full-scale case study is presented. The important topic of economics and the ecological advantages of the process are emphasized. The use of compost, the integration with composting technology, and advantages over other technologies are detailed in the framework of an environmental impact assessment of biowaste treatment. Finally, the anaerobic digestion of MSW in landfills is reviewed in detail, with emphasis on landfill process enhancement and strategies for its application.

Process Intensification - David Reay 2013-06-05

Process Intensification: Engineering for Efficiency, Sustainability and Flexibility is the first book to provide a practical working guide to understanding process intensification (PI) and developing successful PI solutions and applications in chemical process, civil, environmental, energy, pharmaceutical, biological, and biochemical systems. Process intensification is a chemical and process design approach that leads to substantially smaller, cleaner, safer, and more energy efficient process technology. It improves

process flexibility, product quality, speed to market and inherent safety, with a reduced environmental footprint. This book represents a valuable resource for engineers working with leading-edge process technologies, and those involved research and development of chemical, process, environmental, pharmaceutical, and bioscience systems. No other reference covers both the technology and application of PI, addressing fundamentals, industry applications, and including a development and implementation guide Covers hot and high growth topics, including emission prevention, sustainable design, and pinch analysis World-class authors: Colin Ramshaw pioneered PI at ICI and is widely credited as the father of the technology *Revue politique et littéraire* - 1883

*Foundations of Paleoparasitology*

- Adauto Araújo 2014-01-01

Unprecedented initiative in the world, the book compiles the available knowledge on the subject and presents the state-of-the-art in paleoparasitology – term coined about 30 years ago by Brazilian Fiocruz researcher Luiz Fernando Ferreira, pioneer in this science which is concerned with the study of parasites in the past.

Multidisciplinary by essence, paleoparasitology gathers contributions from social

scientists, biologists, historians, archaeologists, pharmacists, doctors and many other professionals, either in biomedical or humanities fields. With varied applications such as in evolutionary or migration studies, their results often depend on the association between laboratory findings and cultural remains. The book is divided into four parts - Parasites, Hosts, and Human Environment; Parasites Remains Preserved in Various Materials and Techniques in Microscopy and Molecular Diagnostics; Parasite Findings in Archeological Remains: a paleographic view; and Special Studies and Perspectives. Signed by authors from various countries such as Argentina, USA, Germany and France, the book has chapters devoted to the discoveries of paleoparasitology on all continents.

*Root Ecology* - Hans de Kroon  
2013-06-29

In the course of evolution, a great variety of root systems have learned to overcome the many physical, biochemical and biological problems brought about by soil. This development has made them a fascinating object of scientific study. This volume gives an overview of how roots have adapted to the soil environment and which roles they play in the soil ecosystem. The text describes the form and function of roots, their temporal and spatial distribution, and their

turnover rate in various ecosystems. Subsequently, a physiological background is provided for basic functions, such as carbon acquisition, water and solute movement, and for their responses to three major abiotic stresses, i.e. hard soil structure, drought and flooding. The volume concludes with the interactions of roots with other organisms of the complex soil ecosystem, including symbiosis, competition, and the function of roots as a food source.

*Strategy For Defeat: The Luftwaffe, 1933-1945 [Illustrated Edition]* - Williamson Murray 2015-11-06

Includes the Aerial Warfare In Europe During World War II illustrations pack with over 200 maps, plans, and photos. This book is a comprehensive analysis of an air force, the Luftwaffe, in World War II. It follows the Germans from their prewar preparations to their final defeat. There are many disturbing parallels with our current situation. I urge every student of military science to read it carefully. The lessons of the nature of warfare and the application of airpower can provide the guidance to develop our fighting forces and employment concepts to meet the significant challenges we are certain to face in the future.

**and Competences** - Jonathan Winterton 2006

The third in a series of Cedefop publications dealing with technical aspects of the European Qualification Framework and European Credit Transfer System, this book analyses current practice in countries that have made progress with evaluating and defining competence. It proposes a typology of knowledge, skills and competence, to be used not as an instrument of 'harmonisation' between countries, but as a template to enable comparison. The aim is to promote mobility in every sense, bringing work-based learning and knowledge acquired in higher education closer together.

Investigative Immunotoxicology

- Helen Tryphonas 2005-01-27  
Investigative Immunotoxicology provides a critical evaluation of proposed experimental animal models and approaches, and discusses the contribution that

immunotoxicity can make to the overall assessment of chemical-induced adverse health effects on humans and the ecosystem.

Following a review of general concepts in immunotoxicology, the book discusses emerging methodologies at the cellular and molecular levels, and describes advances in and requirements for animal model development in testing the allergenicity of foods and genetically modified products. It presents animal models of autoimmunity associated with chemical exposure, includes recommendations for the selection of sentinel species in ecotoxicology, and presents an in-depth review of immunotoxicology as it relates to a variety of wildlife species. Finally, the book explains the role of immunotoxicology in human health risk assessment and the regulatory process. Outlining the potential chemical hazards facing human and

ecosystem health, this is a valuable reference for professionals and researchers in immunotoxicology and risk assessment. It also deserves the attention of the pharmaceutical industry and environmental toxicologists who are concerned

about the effects of xenobiotics on ecosystems.
