## **GENARO STROBEL (BILINGUAL EDITION)** - 2021-01-25

Genaro Strobel creates monumental works on paper using a printing process he developed, which starts with the classic woodcut, but also includes photography, painting, drawing, and collage. The medium of wood becomes the content, as the printing blocks are cut into commercially available types of veneer wood by high-precision lasers working according to computer-generated templates. In this way, the wood grain in the compositions is always visibly imprinted and not simply reproduced. Even the source photographs, such as pictures from an inventors' fair or the Messel pit, shine through in places. With a sense for large-scale compositions, Genaro Strobel always introduces new colors. This publication compiles a selection of his unique pieces, which are four to ten meters high and seven meters wide and on display at the Kunsthalle Darmstadt.

GENARO STROBEL (\*1984, Frankfurt am Main) is the current Charlotte Prince Scholar of the Science City Darmstadt. He finished his studies at the Berlin University of the Arts and the Berlin-Weissensee Art Academy in 2014 through the Academy of Visual Arts in Leipzig. He has participated in numerous exhibitions at home and abroad.

**Winning Ways through Corporate Governance** - Neville Bain 2016-07-27

The motivation for writing this book is the authors' deeply held conviction that good governance is an essential element for any organisation that wishes to maximise its effectiveness. They are not alone in observing that in many cases companies or other organisations that perform badly are often poorly governed. Indeed, the key explanation for poor performance is often poor governance. This observation is not limited geographically and there are many examples from around the world. Concern with good governance is not just limited to the free enterprise system. It is universal.

[Forest Development in Cold Climates](#) - John Alden 2013-06-29

As forests decline in temperate and tropical climates, highly-developed countries and those striving for greater economic and social benefits are beginning to utilize marginal forests of high-latitude and mountainous regions for resources to satisfy human needs. The benefits of marginal forests range from purely aesthetic to providing resources for producing many goods and services demanded by a growing world population. Increased demands for forest resources and amenities and recent warming of high latitude climates have generated interest in reforestation and afforestation of marginal habitats in cold regions. Afforestation of treeless landscapes improves the environment for human habitation and provides for land use and economic prosperity. Trees are frequently planted in cold climates to rehabilitate denuded sites, for the amenity of homes and villages, and for wind shelter, recreation, agroforestry, and industrial uses. In addition, forests in cold climates reduce the albedo of the earth's surface in winter, and in summer they are small but significant long-lived sinks for atmospheric carbon dioxide. Finally, growth and reproductive success of forests at their geographic limits are sensitive indices of climatic change. As efforts to adapt forests to cold climates increase, however, new afforestation problems arise and old ones intensify. Austral, northern, and altitudinal tree limits are determined by many different factors. Current hypotheses for high-latitude tree limits are based on low growing-season temperatures that inhibit plant development and reproduction.
