## **Communications and Multimedia Security** - Bart De Decker 2010-05-29

Over the last decade, we have witnessed a growing dependency on information technology resulting in a wide range of new opportunities. Clearly, it has become almost impossible to imagine life without a personal computer or laptop, or without a cell phone. Social network sites (SNS) are competing with face-to-face encounters and may even oust them. Most SNS adepts have hundreds of "friends", happily sharing pictures and profiles and endless chitchat. We are on the threshold of the Internet of Things, where every object will have its RFID-tag. This will not only affect companies, who will be able to optimize their production and delivery processes, but also end users, who will be able to enjoy many new applications, ranging from smart shopping, and smart fridges to geo-localized services. In the near future, elderly people will be able to stay longer at home due to clever health monitoring systems. The sky seems to be the limit! However, we have also seen the other side of the coin: viruses, Trojan horses, breaches of privacy, identity theft, and other security threats. Our real and virtual worlds are becoming increasingly vulnerable to attack. In order to encourage security research by both academia and industry and to stimulate the dissemination of results, conferences need to be organized. With the 11th edition of the joint IFIP TC-6 TC-11 Conference on Communications and Multimedia Security (CMS 2010), the organizers resumed the tradition of previous CMS conferences after a three-year recess.

**Corporate Credit Risk Management** - Christian Langkamp 2014-02-24

The financial crisis has shown that a significant proportion of the assets held by large corporations are exposed to credit risk that must be managed. This doctoral thesis sets out to analyse the contextual and organisational framework within which these activities are set and the practices employed by professionals in the field. This analysis draws on a set of interview-based data from large corporations in Europe and Brazil, predominantly from the chemical, energy, trading, and general manufacturing industries. Due to their diverse natures, the subjects of customer and financial institution counterparty credit risk are treated separately, addressing for each the organisation of the function, data acquisition process, and IT setup recommendable in order to effectively drive risk management, including a review for the practitioner to analyse his or her processes. A final chapter with analyses regarding trade credit insurance, sovereign risk,

and quantitative special items rounds off the text making it into a comprehensive treatise on credit risk management in an industrial corporation.
