Noun+Noun Compounds in Italian - Radimský Jan 2015-12-28

This book investigates one concrete compounding pattern in present-day Italian within a larger overview of Italian compounding. Various accounts and classifications of Noun + Noun combinations in Italian are reviewed, with special focus on the status of the lexical integrity hypothesis. The author sets out to propose an integrated approach to the Noun + Noun compounding pattern, rigorously based on large representative data sets that were extracted from the Italian web corpus ItWaC as both automatically and manually post-processed frequency lists. On the basis of such data, it is aimed to show the behaviour of various subtypes of Noun + Noun compounds. Starting out with the Bisetto-Scalise classification, the author carefully examines the status of coordinate compounds, ATAP compounds (i.e., the group comprising attributive and appositive structures) and subordinate compounds (comprising verbal-nexus and grounding compounds), discussing both theoretical and empirical implications of this classification scheme. Moreover, the original Bisetto-Scalise model is supplemented with further classification levels in order to capture specific compounding types such as relational (i.e. inherently trinominal) compounds. A major merit of the present study lies in the quantitative dimension of the data it deals with. In light of this data, the author emphasizes the gradient nature of the traditional dichotomy between syntax and compounding. The book will thus appeal not only to the linguists interested specifically in Italian word-formation, but also to a larger community of scholars who seek a more general view of the word-formation phenomena.

The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of "islands" both distinct and connected. Though drawing on philosophers of Europe's past, Cacciari calls not to resist Europe's sunset but to embrace it. Europe will have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today's politics, the political unity of Europe is still a necessity, however impossible it seems to achieve.

Written with humor and for a variety of readers, this book identifies simple properties and axioms of human communication and demonstrates how all communications are actually a function of their contexts. Topics covered in this wide-ranging book include: the origins of communication; the idea that all behavior is communication; meta-communication; the properties of an open system; the family as a system of communication; the nature of paradox in psychotherapy; existentialism and human communication.

Explorations in Personality - Henry A. Murray 2007-11-01

Explorations in Personality, published by Oxford University Press in 1938, set forth a provocative and comprehensive agenda for the scientific study of human personality. Blending no-nonsense empiricism with the humanistic desire to understand the whole person, the book is as relevant to students of personality psychology today as it was to its many readers 70 years ago. Assisted by such eminent colleagues as Erik Erikson and Robert White, Henry Murray set forth a full theory of human personality, illustrated a bevy of creative methods for personality assessment, and presented the results of a landmark study of fifty Harvard men. Explorations in Personality is one of the great classics in 20th century psychology. This reissue, enhanced by Dan McAdams' foreword, which provides a contemporary evaluation of Murray's achievement, will be of great interest to students and researchers in personality psychology and to many other behavioral scientists, scholars, and general readers who wish to understand the psychology of the whole person.

In-Game - Gordon Calleja 2011-05-13

An investigation of what makes digital games engaging to players and a reexamination of the concept of

immersion. Digital games offer a vast range of engaging experiences, from the serene exploration of beautifully rendered landscapes to the deeply cognitive challenges presented by strategic simulations to the adrenaline rush of competitive team-based shoot-outs. Digital games enable experiences that are considerably different from a reader's engagement with literature or a moviegoer's experience of a movie. In *In-Game*, Gordon Calleja examines what exactly it is that makes digital games so uniquely involving and offers a new, more precise, and game-specific formulation of this involvement. One of the most commonly yet vaguely deployed concepts in the industry and academia alike is immersion—a player's sensation of inhabiting the space represented onscreen. Overuse of this term has diminished its analytical value and confused its meaning, both in analysis and design. Rather than conceiving of immersion as a single experience, Calleja views it as blending different experiential phenomena afforded by involving gameplay. He proposes a framework (based on qualitative research) to describe these phenomena: the player involvement model. This model encompasses two constituent temporal phases—the macro, representing offline involvement, and the micro, representing moment-to-moment involvement during gameplay—as well as six dimensions of player involvement: kinesthetic, spatial, shared, narrative, affective, and ludic. The intensified and internalized experiential blend can culminate in incorporation—a concept that Calleja proposes as an alternative to the problematic immersion. Incorporation, he argues, is a more accurate metaphor, providing a robust foundation for future research and design.

Blood, Land, and Sex - Lyda Favali 2003-06-18

In Eritrea, state, traditional, and religious laws equally prevail, but any of these legal systems may be put into play depending upon the individual or individuals involved in a legal dispute. Because of conflicting laws, it has been difficult for Eritreans to come to a consensus on what constitutes their legal system. In *Blood, Land, and Sex*, Lyda Favali and Roy Pateman examine the roles of the state, ethnic groups, religious groups, and the international community in several key areas of Eritrean law -- blood feud or murder, land tenure, gender relations (marriage, prostitution, rape), and female genital surgery. Favali and Pateman explore the intersections of the various laws and discuss how change can be brought to communities where legal ambiguity prevails, often to the grave harm of women and other powerless individuals. This significant book focuses on how Eritrea and other newly emerging democracies might build pluralist legal systems that will be acceptable to an ethnically and religiously diverse population.

Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition - Dina Di Giacomo 2019-03-01

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.
