**Aviation Mechanic General, Airframe, and Powerplant Knowledge Test Guide** - United States. Flight Standards Service 1995

**Gray Matter** - Denny Pollard 2012-03

To be completely frank about it, I'm increasingly aware that there are as many gray areas in aviation as there are black-and-white ones, and I'm beginning to feel as if I know less and less about what I do. I'm a trained and reasonably experienced A&P mechanic, and I'm supposed to know this airplane stuff, but my experiences are often contradictory to what I know are theoretical facts. It's frustrating, and sometimes I think I knew more back when I knew less. Or at least I thought I did. To keep an aircraft in peak operating condition, aircraft mechanics and service technicians perform scheduled maintenance to make repairs and complete inspections required by the Federal Aviation Administration (FAA). Many aircraft mechanics specialize in preventive maintenance. They inspect engines, landing gear, instruments, pressurized sections, accessories—brakes, valves, pumps, and air-conditioning systems, for example—and other parts of the aircraft and do the necessary maintenance and replacement of parts. Inspections take place following a schedule based on the number of hours the aircraft has flown, calendar days, cycles of operation, or a combination of these factors. To examine an engine, aircraft mechanics work through specially designed openings while standing on ladders or scaffolds, or use hoists or lifts to remove the entire engine from the craft. After taking an engine apart, mechanics use precision instruments to measure parts for wear and use x-ray and magnetic inspection equipment to check for invisible cracks. Worn or defective parts are repaired or replaced. They may also repair sheet metal or composite surfaces, measure the tension of control cables, and

check for corrosion, distortion, and cracks in the fuselage, wings, and tail. After completing all repairs, mechanics must test the equipment to ensure that it works properly.

**Web-based Collaborative Learning** - James Belanich 2003  
Students linked into a learning environment over the Internet may learn topics better by collaborating to create questions and answers. In research reported here, students used a learning aid for collaborative question generation called Army TEAMThink, a commercial program modified for Army use under a TRADOC Delivery Order contract Research was done at three US Army schools to assess the quality or doctrinal correctness of questions and answers generated by students and to measure any learning benefit. Students first completed a tutorial on how to write effective multiple-choice questions. Next, students wrote questions and reviewed questions written by other students. Based on the feedback from the reviews, authors were allowed to modify their own questions. Finally, students took a test of the questions that had been developed by students using the learning aid. Army subject matter experts judged that most of the questions developed were considered acceptable and could be repurposed for use in course exams. A majority of the question feedback was constructive, indicating that the collaborative process was helpful. Students who went through the process scored higher on a test of novel questions than those who did not use Army TEAMThink. They also scored higher than students who went through the process on a different topic from the test topic, demonstrating a moderate learning effect. The general finding of this research about a collaborative question-generation approach is that instructors can accumulate quality multiple-choice questions and monitor student comprehension, and students have an additional opportunity for better learning.

**Testing in the Schools** - Walter E. Hathaway 1983

Abstract: The re-emergence of testing in the American school system and ways in which the education and measurement fields are attempting to enhance the potential value and importance of tests are examined in this sourcebook. A national profile of the use of testing in schools describes the wide variety of tests used, the purposes for which principals and teachers use test results, and their opinions on how successful test data are in meeting their goals. Guidelines are provided to help teachers and parents better prepare students for standardized testing. The issue of equity in the testing of minority children and ways in which testing can be used to help all children learn are explored. Additional topics include 1) the strengths, limitations, and inner workings of teacher-made tests, 2) understanding, evaluating, and using latent trait research analysis and item response theory, and 3) current and future applications of microcomputer technology in school testing. Five case studies in specific school systems illustrate how some of the theoretical issues in testing have been applied in state and local practices. Case studies describe 1) improvement of test results dissemination and use through cooperative planning, integrated database development, and public media, 2) ways in which a testing program can support a district-wide instructional improvement process and formation of a building test coordinators' network, and 3) testing as an effective part of a statewide accountability and instructional

improvement program. (aje).
