Classroom Assessment and the National Science

Education Standards -

National Research

Council 2001-08-12

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the

teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and

grading-and how it fits into the larger, comprehensive assessment system.

Off Target - William Wolf 2021-03-13

Every week the TV news highlights the routine use of drones and guided missiles against terrorist enemies and the recreational use of drones has become commonplace. The Nazi WWII development of guided missiles and bombs is often given credit for America's Cold War success in this realm. However, it was during that war that America, and the Air Force, in particular, also began the development of systems and weapons that laid

the foundation for today's technology. 'Off Target' relates in detail the then "Secret" research, development, and combat employment of these early guided bombs, missiles, and drones from 1917 to 1948. Using formerly Secret/Confidential manuals, reports, microfilm print outs, and photos, collected over 40 years, author Wolf, gives the air war historian and enthusiast a detailed look at this unknown topic that progressed from biplane drones to sophisticated post-WWII guided missiles. Among the subjects discussed are Sperry's aerial torpedo and the Kettering "Bug" of WWI to WWII's early rudimentary GB Series Glide Bombs to the more sophisticated VB Series that evolved from radio, heat, light, or television guidance. The Aphrodite/Joseph Kennedy

B-17, BQ, TDR, and target drones are discussed as are the SWOD, GLOMB, GORGON, and JB Jet bomb series.

Educating the Student Body - Institute of Medicine 2013-11-30
Physical inactivity is a

key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for

youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to

guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in

physical activity, physical education, and health for school-aged children and adolescents.

Qualification Tests -
1977*

Skill Qualification Tests (SQT) are the quality control instruments for the Army's new Enlisted Personnel Management System. The tests, used to evaluate soldier's job mastery, are developed by personnel in Army agencies responsible for the various job specialties. handbook was prepared for use by SQT developers in the Army. The handbook covers both technical and administrative procedures to follow in preparing a field-tested SQT. Included are techniques and procedures pertaining to: which job tasks to test; what method of testing to use; how to develop a hands-on test; how to develop a performance-oriented written test; how to validate tests; and how to prepare guidance for test administration.
