Narrating the New African Diaspora -

Maximilian Feldner 2019-01-25

This book provides the first comprehensive survey and collection of Nigerian diaspora literature, offering readings of novelists such as Chimamanda Ngozi Adichie, Sefi Atta, Helon Habila, Helen Oyeyemi, Taiye Selasi, Chika Unigwe, Chris Abani, and Ike Oguine. As members of the new African diaspora, their literature captures experiences of recent Nigerian migration to the United States and the United Kingdom. Examining representative novels, such as Adichie's *Half of a Yellow Sun* and *Americanah*, Habila's *Waiting for an Angel*, Abani's *GraceLand*, and Oyeyemi's *The Icarus Girl*, the book discusses these novels' literary and narrative methods and provides detailed analyses of two of the most common themes: depictions of migratory experiences and representations of Nigeria. Placing the novels in their relevant historical, sociological, philosophical, and theoretical contexts, *Narrating the New African Diaspora* presents an insightful study of current anglophone Nigerian narrative literature.

The Creative Mindset - Jeff DeGraff
2020-09-29

"Jeff and Staney emphasize that small acts of creativity can have huge consequences and that ordinary people can do extraordinary things if they can see the opportunities in front of them." —Mitch Jacobson, Executive Director, Austin Technology Incubator, UT Blackstone LaunchPad, University of Texas at Austin

Nearly all of today's major innovation workshops and programs call on organizations to drive innovation. What they miss is that innovation comes from the personal creativity of individuals. And creativity doesn't require an advanced education or technical skills—all employees can be creative. Often, all they lack is a fitting mindset and the right skills. The Creative Mindset brings how-to advice, tools, and techniques from two master innovators who have taught and worked with over half of all Fortune 500 companies. Jeff and Staney DeGraff introduce six essential creative-thinking skills that can be easily mastered with limited practice and remembered as the acronym CREATE: Concentrate, Replicate, Elaborate, Associate, Translate, and Evaluate. These six skills, sequenced as steps, simplify and summarize the most important research on creative thinking and draw on over thirty years of real-world application in some of the most innovative organizations in the world. It's time to rethink the way we make innovation happen. Individual creativity is an immense untapped resource, and you don't have to be Beethoven to make a big difference. As the spirit of chef Gusteau

proclaims in the Pixar classic *Ratatouille*, "Anyone can cook."

Thinkpak - Michael Michalko 2006

Contains idea-triggering questions based on nine principles of creativity (substitute, combine, adapt, magnify or add, modify, put to some other use, eliminate, rearrange, reverse). Designed to stimulate creative thinking about problems and generate new ideas in business or other settings.

Mega Brain - Michael Hutchinson 1996-09
Scientists have learned more about the brain in the last decade than in all of previous history, and the implications of the latest research are clear: The human brain is far more powerful, and has the potential for immensely greater growth and transformation, than was ever before imagined. These discoveries may constitute the most significant development in learning since the invention of writing. Michael Hutchinson captures all the drama, excitement, and adventure as we finally begin to comprehend the most mysterious

and complex structure in the universe, the source of human culture, a still untapped reservoir of power and skills. He looks at the recently developed machines and devices that may soon allow us to increase brain size and intelligence; regenerate brain cells; trigger specific brain states such as euphoria, long- and short-term memory, sexual excitement, and creativity; and control the brain's electrical activity in order to alter such "involuntary" mechanisms as blood pressure, heart rate, and the secretion of hormones. Megabrain is a lucid and lively account of where the pioneers in brain research are headed -- and where they are taking us.

Curriculum Models for the 21st Century - Maree Gosper 2013-08-28

Changing student profiles and the increasing availability of mainstream and specialized learning technologies are stretching the traditional face-to-face models of teaching and learning in higher education. Institutions, too, are facing far-reaching systemic changes which are placing strains on existing resources and physical infrastructure and calling into question traditional ways of teaching through lectures and tutorials. And, with an ever-increasing scrutiny on teaching and teachers' accountability for positive educational outcomes, the call for closer attention to learning, teaching and, most especially, to the design and delivery of the curriculum is given increasing relevance and importance. Research provides strong evidence of the potential for technologies to facilitate not only cognition and learning but also to become integral components in the redesign of current curriculum models. Some Universities and individual academics have moved along this pathway, developing new and innovative curriculum, blending pedagogies and technologies to suit their circumstances. Yet, there are others, unsure of the possibilities, the opportunities and constraints in these changing times. Curriculum Models for the 21st Century gives insights into how teaching and learning can be done differently. The focus is on a whole of curriculum approach,

looking at theoretical models and examples of practice which capitalize on the potential of technologies to deliver variations and alternatives to the more traditional lecture-based model of University teaching.

Training Trances - John Overdurf 1995

Training Trances is about how to therapeutically communicate with the unconscious mind. The authors present their own unique integration of Ericksonian techniques, traditional models of hypnotherapy, and recent research in related areas. Numerous new patterns modeled from the work of Milton H. Erickson, M.D. are clearly explained and

demonstrated. The use of trance in training design, to unconsciously install the skills being taught to the participants, is also covered. The book developed from transcripts of a four day workshop, and the design of the book parallels the design chosen for the training itself. Individual exercises or those done in groups of two or three are offered so that the reader may practice the techniques and learn the skills. There are numerous "live" demonstrations, inductions, and double inductions which create for the reader a real "feel" of how hypnosis is done and which are also a rich source for linguistic analysis for the advanced reader. Written with insight and humor, this book's most unique twist is its use of multi-level communication and hypnotic language to create a "training trance" for the readers as they journey through the text. Some hypnotic references are obvious and explicit -- those which are not obvious will create enjoyable "ah-ha!" experiences for the reader as they are discovered.

The Deliberate Dumbing Down of America - Charlotte Thomson Iserbyt 1999

In this book you will discover "how good teachers across America have been forced to use controversial, non-academic methodology in their classrooms; how "school choice" is being used to further dangerous reform goals, and how home schooling and private education are especially vulnerable; how workforce training (school-to-work) is an essential part of an overall plan for a global economy, and how this plan will shortcircuit your child's future career plans and opportunities; [and] how the international, national, regional, state and local agendas for education reform are all interconnected and have been for decades. The deliberate dumbing down of America is a chronological history of the past 100+ years of education reform. Each chapter takes a period of history and recounts the significant events, including important geopolitical and societal contextual information. Citations from government plans, policy documents, and key writings by leading reformers record the rise of the modern education reform movement"--Website:

Accelerated Learning for the 21st Century - Colin Rose 2011-11-02

We live in an era when the unprecedented speed of change means: The only certainty is uncertainty; you can't predict what skills will be useful in ten years time; in most professions knowledge is doubling every two or three years; and no job is forever--so being employable means being flexible and retraining regularly. Accelerated Learning into the 21st Century contains a simple but proven plan that delivers the one key skill that every working person, every parent and

student must master, and every teacher should teach: it's learning how to learn. The theory of eight multiple intelligences (linguistic, logical-mathematical, visual-spatial, kinesthetic, musical, interpersonal, intrapersonal, and naturalist) developed by Howard Gardner at Harvard University provides a foundation for the six-step MASTER-Mind system to facilitate learning (an acronym for Mind, Acquire, Search, Trigger, Exhibit, and Review), and is enhanced by the latest findings on the value of emotion and memory on the process of learning. Combined with motivational stories of success applying these principles, and putting forth a clear vision of how the United States can dramatically improve the education system to remain competitive in the next century, Accelerated Learning into the 21st Century is a dynamic tool for self-improvement by individuals as diverse as schoolchildren and corporate executives.
