Supply Chain Management in the Drug Industry - Hedley Rees 2011-04-06

This book bridges the gap between practitioners of supply-chain management and pharmaceutical industry experts. It aims to help both these groups understand the different worlds they live in and how to jointly contribute to meaningful improvements in supply-chains within the globally important pharmaceutical sector. Scientific and technical staff must work closely with supply-chain practitioners and other relevant parties to help secure responsive, cost effective and risk mitigated supply chains to compete on a world stage. This should not wait until a drug has been registered, but should start as early as possible in the development process and before registration or clinical trials. The author suggests that CMC (chemistry manufacturing controls) drug development must reset the line of sight - from supply of drug to the clinic and gaining a registration, to the building of a patient value stream. Capable processes and suppliers, streamlined logistics, flexible plant and equipment, shorter cycle times, effective flow of information and reduced waste. All these factors can and should be addressed at the CMC development stage.

Supply Chain and Distribution Management - Rakowski 2009-10-01

Seminar paper from the year 2009 in the subject Business economics - Business Management, Corporate Governance, grade: 83 %, University of Western Sydney (Sydney Graduate School of Management), language: English, abstract: This assignment will explore various aspects of an efficient Supply Chain and Distribution Management System. The authors believe that after reading this work, a company knows exactly what needs to be considered when creating a successful Supply Chain and Distribution Management System. The examples, chosen in the text, of companies such as Dell, DHL, Wal-Mart, as well as Toyota illustrate how companies achieved improvements in their Supply Chain or Distribution Management System. Additionally, the authors explain various manufacturing processes used by different companies. What needs to be understood is that the costs, time and risks involved have to be carefully planned, evaluated and continuously observed as the environment can change very quickly. In today's environment it is supply chains competing against each other rather than companies competing against each other (Fynes, De Burca and Voss, 2005). "If you are not able to meet your customers increasing specific demands, you will not be able to compete with those who can - and will" (i2, 2008).

Supply Chain Management - Ernst Kurzmann 2020-09-18

Products and services are the result of the complex interaction of many individual value creators. Every enterprise has business connections with other participants of the supply chain suppliers, service providers, end customers. Supply chain management is the radical orientation of all activities along the value-added chain towards customer benefit. The individual links of the supply chain typically are legally independent entities looking for the respective optimum for their companies. It is a fact, however, that the total of many individual optima does not guarantee an overall optimum output. This is precisely where Supply Chain Management sets in: coordination along the whole supply chain to improve the overall performance and the overall costs to the benefit of everyone involved.

Skills for Business and Management - Martin Sedgley 2020-04-15

This book provides practical guidance and strategies to help students make a successful transition to university and unlock their academic potential. Chapters are organised around five essential skills for success: time management, academic reading, academic writing and group-work, all of which are underpinned by independent learning. Students will learn how to demonstrate critical analysis in their writing, overcome challenges in group projects and deliver presentations with confidence and focus. In bringing together academic and employability skills, readers are encouraged to make connections between the skills they have developed inside and outside the classroom and to start the process of personal development planning sooner rather than later. Packed with activities, 'pause for thought' reflective tasks, student insights and model assignments, *Skills for Business and Management* is an essential resource for undergraduates and postgraduates on any business and management course. It is also ideal for those studying relating fields, such as accounting, finance, human resource management, hospitality, marketing and tourism management.
