The Fourth Industrial Revolution -

Klaus Schwab 2017-01-03

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from

supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and

shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

The Future of Risk Management -

Howard Kunreuther 2019-07-26
Whether man-made or naturally occurring, large-scale disasters can cause fatalities and injuries, devastate property and communities, savage the environment, impose significant financial burdens on individuals and firms, and test political leadership. Moreover, global challenges such as climate change and terrorism reveal the interdependent and interconnected nature of our current moment: what occurs in one nation or geographical region is likely to have effects across the globe. Our information age

creates new and more integrated forms of communication that incur risks that are difficult to evaluate, let alone anticipate. All of this makes clear that innovative approaches to assessing and managing risk are urgently required. When catastrophic risk management was in its inception thirty years ago, scientists and engineers would provide estimates of the probability of specific types of accidents and their potential consequences. Economists would then propose risk management policies based on those experts' estimates with little thought as to how this data would be used by interested parties. Today, however, the disciplines of finance, geography, history, insurance, marketing, political science, sociology, and the decision sciences combine scientific knowledge on risk assessment with a better appreciation for the importance of improving individual and collective decision-making

processes. The essays in this volume highlight past research, recent discoveries, and open questions written by leading thinkers in risk management and behavioral sciences. The Future of Risk Management provides scholars, businesses, civil servants, and the concerned public tools for making more informed decisions and developing long-term strategies for reducing future losses from potentially catastrophic events. Maternity and Paternity at Work -

Laura Addati 2014-05-13

This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well

national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No. 191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour rights.

Performance in a Pandemic - Laura Bissell 2021-12

"This edited collection gathers UK and international artists, academics, practitioners and researchers in the fields of contemporary performance, dance and live art to offer creative-

critical responses to the impact of the COVID-19 pandemic on their work. Themes addressed in these case studies include the ways in which liveness functions across digital platforms, the new demands on audiences and performance-makers, those artists and makers who can't or won't move their practice online, and the impact on international festivals as the digital removes geographical and locational restrictions. Brought together, these examples capture the creative activity and output that this unexpected cultural moment has provoked. Creative-critical responses interrogate what the global pandemic has taught us about what it is to make live work during lockdown, and explore what the future of performance-making in a post-Covid world might look like. For all scholars and performance makers whose work brings them into the sphere of contemporary art and culture, this is an essential and stimulating account

of practice at the beginning of the 2020s"--

Practical Aspects of Signal Detection in Pharmacovigilance - 2010

In recent years public expectations for rapid identification and prompt management of emerging drug safety issues have grown swiftly. Over a similar timeframe, the move from paper-based adverse event reporting systems to electronic capture and rapid transmission of data has resulted in the accrual of substantial datasets capable of complex analysis and querying by industry, regulators and other public health organizations. These two drivers have created a fertile environment for pharmacovigilance scientists, information technologists and statistical experts, working together, to deliver novel approaches to detect signals from these extensive and quickly growing datasets, and to manage them appropriately. In following this

exciting story, this report looks at the practical consequences of these developments for pharmacovigilance practitioners. The report provides a comprehensive resource for those considering how to strengthen their pharmacovigilance systems and practices, and to give practical advice. But the report does not specify instant solutions. These will inevitably be situation specific and require careful consideration taking into account local needs. However, the CIOMS Working Group VIII is convinced that the combination of methods and a clear policy on the management of signals will strengthen current systems. Finally, in looking ahead, the report anticipates a number of ongoing developments, including techniques with wider applicability to other data forms than individual case reports. The ultimate test for pharmacovigilance systems is the demonstration of public health benefit and it is this

test which signal detection methodologies need to meet if the expectations of all stakeholders are to be fulfilled.

Only the Paranoid Survive - Andrew S. Grove 2010-05-05

Andy Grove, founder and former CEO of Intel shares his strategy for success as he takes the reader deep inside the workings of a major company in *Only the Paranoid Survive*. Under Andy Grove's leadership, Intel became the world's largest chip maker and one of the most admired companies in the world. In *Only the Paranoid Survive*, Grove reveals his strategy for measuring the nightmare moment every leader dreads--when massive change occurs and a company must, virtually overnight, adapt or fall by the wayside--in a new way. Grove calls such a moment a Strategic Inflection

Point, which can be set off by almost anything: mega-competition, a change in regulations, or a seemingly modest change in technology. When a Strategic Inflection Point hits, the ordinary rules of business go out the window. Yet, managed right, a Strategic Inflection Point can be an opportunity to win in the marketplace and emerge stronger than ever. Grove underscores his message by examining his own record of success and failure, including how he navigated the events of the Pentium flaw, which threatened Intel's reputation in 1994, and how he has dealt with the explosions in growth of the Internet. The work of a lifetime, *Only the Paranoid Survive* is a classic of managerial and leadership skills. *The Resilient Enterprise* - Martin Reeves 2021-08-23

The Covid-19 crisis caused massive disruptions to businesses around the world. Many were caught unprepared by the pandemic, putting some in danger

of collapse. But not all were equally affected—some emerged from the crisis in a position of advantage. Research on corporate performance over decades shows that the dispersion between companies consistently increases in times of crisis. In other words, resilience to unexpected shocks has a disproportionate impact on long-term competitive advantage. Furthermore, ongoing trends are making it harder for businesses to sustain success over time. New offerings are being adopted, matched, and made obsolete faster, and competitive advantage is becoming less durable. In order to survive in the long run, businesses must reinvent themselves regularly—doing the same thing over and over will eventually lead to failure. Many business leaders are now expressing an intention to make their companies more resilient, but there is not yet a well-codified playbook for doing so. This book, drawing on research from the BCG

Henderson Institute over many years, provides a set of perspectives on how to thrive under adverse conditions and how to reinvent businesses for the changing context. Overcoming both of these challenges is necessary for leaders to build long-lasting companies.

The Wellington Experience - David O. Smith 2020-09

This study examines the observations of U.S. military personnel who attended India's Defence Services Staff College (DSSC) at Wellington. Although the DSSC is a tri-service professional military education institution, this study focuses primarily on the Indian Army, the largest and most influential military service in India. Collectively, U.S. personnel at the DSSC had sustained interactions over an extended period of time with three distinct groups of Indian Army officers: senior officers (brigadier through lieutenant general), senior midlevel (lieutenant colonel and colonel), and junior midlevel (captain and major). The

study focuses on the attitudes and values of the Indian Army officer corps over a 38-year period, from 1979 to 2017, to determine if there was change over time, and if so, to understand the drivers of that change.

The Three-Box Solution - Vijay Govindarajan 2016-04-26
How to Innovate and Execute Leaders already know that innovation calls for a different set of activities, skills, methods, metrics, mind-sets,

and leadership approaches. And it is well understood that creating a new business and optimizing an already existing one are two fundamentally different management challenges. The real problem for leaders is doing both, simultaneously. How do you meet the performance requirements of the existing business—one that is still thriving—while dramatically reinventing it? How do you envision a change in your current business model before a crisis forces you to abandon it? Innovation guru Vijay Govindarajan expands the leader's innovation tool kit with a simple and proven method for allocating the organization's energy, time, and resources—in balanced measure—across what he calls “the three boxes”:

- Box 1: The present—Manage the core business at peak profitability
- Box 2: The past—Abandon ideas, practices, and attitudes that could inhibit innovation
- Box 3: The future—Convert breakthrough ideas

into new products and businesses The three-box framework makes leading innovation easier because it gives leaders a simple vocabulary and set of tools for managing and measuring these different sets of behaviors and activities across all levels of the organization. Supported with rich company examples—GE, Mahindra & Mahindra, Hasbro, IBM, United Rentals, and Tata Consultancy Services—and testimonies of leaders who have successfully used this framework, this book solves once and for all the practical dilemma of how to align an organization on the critical but competing demands of innovation.

Can technology and human beings coexist in a mutually beneficial

way? In this ground-breaking book, N. Chandrasekaran, chairman of Tata Sons, the holding company and promoter of more than 100 Tata operating companies, presents a radical reimagining of the future of technology and reveals how it has the potential to solve the world's biggest challenges. And he says- this reality is possible. It is within reach. With Bridgital. To the coming disruption of artificial intelligence, he proposes an ingenious solution- to use it as an aid. Instead of taking jobs away, AI can generate them. Instead of replacing workers, AI will assist them. the Bridgital model can address our divide between rich and poor, skilled and unskilled, and can provide better service delivery in health, transport, law and education. It could create and impact millions of jobs around the world. One of the country's foremost industry leaders and pioneers, N. There is simply no other major business like the Tata Group—a company whose bottom line is doing the right thing for society. How did Tata transform itself from a family-owned business to one of the most professionally managed enterprises in the world? How did it become a world leader in an array of unrelated

This brief history of the Tatas charts the contribution of every Tata chairman—from Jamsetji Tata, who set up the company in 1868, to Ratan Tata and Cyrus Mistry—and explores the values at the heart of the Tata Group, as well as the role played in its development by the philanthropic trusts that own two-thirds of the company. For anyone curious about this Indian company that has become a leading global player, this book is the perfect introduction.

RECRUITMENT AND SELECTION PRACTICES OF IT COMPANIES IN ANDHRA PRADESH - A STUDY OF SELECT UNITS - Dr. Ravi

Kumar Gummadi 2015-09-01

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few

years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges,

recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer

contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations

and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to “fit in” with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign

counterparts to remain competitive and survive in global and domestic markets.

The Delta Model - Arnoldo C. Hax
2009-11-27

Strategy is the most central issue in management. It has to do with defining the purpose of an organization, understanding the market in which it operates and the capabilities the firm possesses, and putting together a winning plan. There are many influential frameworks to help managers undertake a systematic reflection on this issue. The most dominant approaches are Michael Porter's "Competitive Strategy" and the "Resource-Based View of the Firm," popularized by Gary Hamel and C.K. Prahalad. Arnoldo Hax argues there are fundamental

drawbacks in the underlying hypotheses of these approaches in that they define strategy as a way to achieve sustainable competitive advantage. This line of thinking could be extremely dangerous because it puts the competitor at the center and therefore anchors you in the past, establishes success as a way of beating your competitors, and this obsession often leads toward imitation and congruency. The result is commoditization - which is the worst outcome that could possibly happen to a business. The Delta Model is an extremely innovative view of strategy. It abandons all of these assumptions and instead puts the customer at the center. By doing that it allows us to be truly creative, separating ourselves from the herd in pursuit of a unique and differentiated customer value proposition. Many years of intense research at MIT, supported by an extensive consulting practice, have

resulted in development of powerful new concepts and practical tools to guide organizational leaders into a completely different way of looking at strategy, including a new way of doing customer segmentation and examining the competencies of the firm, with an emphasis on using the extended enterprise as a primary way of serving the customer. This last concept means that we cannot play the game alone; that we need to establish a network among suppliers, the firm, the customers, and complementors - firms that are in the business of developing products and services that enhance our own offering to the customer. Illustrated through dozens of examples, and discussion of application to small and medium-sized businesses and not-for-profits, the Delta Model will help readers in all types of organizations break out of old patterns of behavior and achieve strategic flexibility -- an especially timely talent during times

of crisis, intense competition, and rapid change.

Super Thinking - Gabriel Weinberg
2019-06-18

A WALL STREET JOURNAL BESTSELLER!
"You can't really know anything if you just remember isolated facts. If the facts don't hang together on a latticework of theory, you don't have them in a usable form. You've got to have models in your head." - Charlie Munger, investor, vice chairman of Berkshire Hathaway The world's greatest problem-solvers, forecasters, and decision-makers all rely on a set of frameworks and shortcuts that help them cut through complexity and separate good ideas from bad ones. They're called mental models, and you can find them in dense textbooks on psychology, physics, economics, and more. Or, you can just read Super Thinking, a fun,

illustrated guide to every mental model you could possibly need. How can mental models help you? Well, here are just a few examples... • If you've ever been overwhelmed by a to-do list that's grown too long, maybe you need the Eisenhower Decision Matrix to help you prioritize. • Use the 5 Whys model to better understand people's motivations or get to the root cause of a problem. • Before concluding that your colleague who messes up your projects is out to sabotage you, consider Hanlon's Razor for an alternative explanation. • Ever sat through a bad movie just because you paid a lot for the ticket? You might be falling prey to Sunk Cost Fallacy. • Set up Forcing Functions, like standing meeting or deadlines, to help grease the wheels for changes you want to occur. So, the next time you find yourself faced with a difficult decision or just trying to understand a complex situation, let Super Thinking upgrade
