Consuming mobility - Jorrit O. Nijhuis 2013-11-25

The current fossil fuel-based system of mobility is associated with a wide range of environmental and social problems. There is a growing body of literature on system innovations and transitions which has as a common understanding that long-term transformative change is necessary to deal

with these complex problems. However, knowledge on the crucial role of citizen-consumers in sustainable mobility transitions is still underdeveloped. By incorporating the viewpoint of consumption patterns and everyday life routines, this book provides (new) knowledge on the role of citizen-consumers in sustainable mobility transitions. Theoretically, a practice based approach is developed as a novel framework to analyse, understand and influence transition processes to sustainable mobility at the level of everyday life. The focus in each of the three cases studies is on situated interactions between consumers and producers. Amongst these is an analysis of the role environmental information and subsidies in new car purchasing. Also, various examples in which an attempt was

made to orchestrate a (modal) shift in commuting practices are examined. Each of the empirical case studies shows the important role of contextual factors in understanding and influencing mobility behaviour of citizen-consumers. In addition, this book helps to understand how and why innovation in mobility practices takes place or not.

Using R for Introductory Statistics - John Verzani 2018-10-03

The second edition of a bestselling textbook, *Using R for Introductory Statistics* guides students through the basics of R, helping them overcome the sometimes steep learning curve. The author does this by breaking the material down into small, task-oriented steps. The second edition maintains the features that made the first edition so popular, while

updating data, examples, and changes to R in line with the current version. See *What's New in the Second Edition*: Increased emphasis on more idiomatic R provides a grounding in the functionality of base R. Discussions of the use of RStudio helps new R users avoid as many pitfalls as possible. Use of knitr package makes code easier to read and therefore easier to reason about. Additional information on computer-intensive approaches motivates the traditional approach. Updated examples and data make the information current and topical. The book has an accompanying package, *UsingR*, available from CRAN, R's repository of user-contributed packages. The package contains the data sets mentioned in the text (`data(package="UsingR")`), answers to selected problems (`answers()`), a few demonstrations (`demo()`), the errata (`errata()`), and sample code from the text. The topics of this text line up closely with traditional teaching progression; however, the book also highlights computer-intensive approaches to motivate the more traditional approach. The authors emphasize realistic data and examples and rely on visualization techniques to gather insight. They introduce statistics and R seamlessly, giving students the tools they need to use R and the information they need to navigate the sometimes complex world of statistical computing.

Living a Life You Love - Joyce Meyer 2018-04-03

You may also express love for more temporal things like a good cup of coffee, your home, or a nice dinner at your favorite restaurant. But it is rarer to truly say "I love my life!" It's common to be more frustrated with life than at peace with it, because the daily grind wears you down.

Responsibilities and burdens become heavy and rob you of the happiness you're meant to have as a child of God. But you can be hopeful, learn to rise above your challenges, and be filled with wonder at what God might do every day. God has already blessed you with a life to love--and it's time to start LIVING A LIFE YOU LOVE.

Languages of Science in the Eighteenth Century - Britt-Louise Gunnarsson
2011-10-28

The eighteenth century is an important period both in the history of science and in the history of languages. Interest in science, and especially in the useful sciences, exploded and a new, modern approach to scientific discovery and the accumulation of knowledge emerged. It was during this century, too, that ideas on language and language practice began to change. Latin had been more or less the only written language used for scientific purposes, but gradually the vernaculars became established as fully acceptable alternatives for scientific writing. The period is of interest, moreover, from a genre-historical point of view. Encyclopedias, dictionaries and also correspondence played a key role in the spread of scientific ideas. At the time, writing on scientific matters was not as distinct from fiction, poetry or religious texts as it is today, a fact which also gave a

creative liberty to individual writers. In this volume, seventeen authors explore, from a variety of angles, the construction of a scientific language and discourse. The chapters are thematically organized into four sections, each contributing to our understanding of this dynamic period in the history of science: their themes are the forming of scientific communities, the emergence of new languages of science, the spread of scientific ideas, and the development of scientific writing. A particular focus is placed on the Swedish botanist Carl Linnaeus (1707-1778). From the point of view of the natural sciences, Linnaeus is renowned for his principles for defining genera and species of organisms and his creation of a uniform system for naming them. From the standpoint of this volume, however, he is also of interest as an example of a European scientist of the eighteenth century. This volume is unique both in its broad linguistic approach - including studies on textlinguistics, stylistics, sociolinguistics, lexicon and nomenclature - and in its combination of language studies, philosophy of language, history and sociology of science. The book covers writing in different European languages: Swedish, German, French, English, Latin, Portuguese, and Russian. With its focus on the history of scientific language and discourse during a dynamic period in Europe, the book promises to contribute to new insights both for readers interested in language history and those with an interest in the history of ideas and

thought.

French Rococo Ébénisterie in the J. Paul Getty Museum - Gillian Wilson
2021-03-30

The first comprehensive catalogue of the Getty Museum's significant collection of French Rococo ébénisterie furniture. This catalogue focuses on French ébénisterie furniture in the Rococo style dating from 1735 to 1760. These splendid objects directly reflect the tastes of the Museum's founder, J. Paul Getty, who started collecting in this area in 1938 and continued until his death in 1976. The Museum's collection is particularly rich in examples created by the most talented cabinet masters then active in Paris, including Bernard van Risenburgh II (after 1696–ca. 1766), Jacques Dubois (1694–1763), and Jean-François Oeben (1721–1763). Working for members of the French royal family and aristocracy, these craftsmen excelled at producing veneered and marquetry pieces of furniture (tables, cabinets, and chests of drawers) fashionable for their lavish surfaces, refined gilt-bronze mounts, and elaborate design. These objects were renowned throughout Europe at a time when Paris was

considered the capital of good taste. The entry on each work comprises both a curatorial section, with description and commentary, and a conservation report, with construction diagrams. An introduction by Anne-Lise Desmas traces the collection's acquisition history, and two technical essays by Arlen Heginbotham present methodologies and findings on the analysis of gilt-bronze mounts and lacquer. The free online edition of this open-access publication is available at www.getty.edu/publications/rococo/ and includes zoomable, high-resolution photography. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book, and JPG downloads of the main catalogue images.

The Violence of Incarceration - Phil Scraton 2008-07-01

Conceived in the immediate aftermath of the humiliations and killings of

prisoners in Afghanistan and Iraq, of the suicides and hunger strikes at Guantanamo Bay and of the disappearances of detainees through extraordinary rendition, this book explores the connections between these shameful events and the inhumanity and degradation of domestic prisons within the 'allied' states, including the USA, Canada, Australia, the UK and Ireland. The central theme is that the revelations of extreme brutality perpetrated by allied soldiers represent the inevitable end-product of domestic incarceration predicated on the use of extreme violence including lethal force. Exposing as fiction the claim to the political moral high ground made by western liberal democracies is critical because such claims animate and legitimate global actions such as the 'war on terror' and the indefinite detention of tens of thousands of people by the United States which accompanies it. The myth of moral virtue works to hide, silence, minimize and deny the brutal continuing history of violence and incarceration both within western countries and undertaken on behalf of western states beyond their national borders.

Yamaha YZF-R1 1998-2003

Cultural Techniques - Bernhard Siegert 2015-05-01

In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. *Cultural Techniques* aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium's individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word *Kultur*. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as "in-betweens," shifting from first-order to second-order techniques, from the technical to the artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural

Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l'oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses.

Designing Web Navigation - James Kalbach 2007-08-28

Thoroughly rewritten for today's web environment, this bestselling book offers a fresh look at a fundamental topic of web site development: navigation design. Amid all the changes to the Web in the past decade, and all the hype about Web 2.0 and various "rich" interactive technologies, the basic problems of creating a good web navigation system remain. *Designing Web Navigation* demonstrates that good navigation is not about technology—it's about the ways people find information, and how you guide them. Ideal for beginning to intermediate web designers, managers, other non-designers, and web development pros looking for another perspective, *Designing Web Navigation* offers basic design principles, development techniques and practical advice, with real-world examples and essential

concepts seamlessly folded in. How does your web site serve your business objectives? How does it meet a user's needs? You'll learn that navigation design touches most other aspects of web site development. Dunhuang Manuscript Culture - Imre Galambos 2020-12-07

“Dunhuang Manuscript Culture” explores the world of Chinese manuscripts from ninth-tenth century Dunhuang, an oasis city along the network of pre-modern routes known today collectively as the Silk Roads.

The manuscripts have been discovered in 1900 in a sealed-off side-chamber of a Buddhist cave temple, where they had lain undisturbed for almost nine hundred years. The discovery comprised tens of thousands of texts, written in over twenty different languages and scripts, including Chinese, Tibetan, Old Uighur, Khotanese, Sogdian and Sanskrit. This study centres around four groups of manuscripts from the mid-ninth to the late tenth centuries, a period when the region was an independent kingdom ruled by local families. The central argument is that the manuscripts attest to the unique cultural diversity of the region during this period, exhibiting—alongside obvious Chinese elements—the heavy influence of Central Asian cultures. As a result, it was much less ‘Chinese’

than commonly portrayed in modern scholarship. The book makes a contribution to the study of cultural and linguistic interaction along the Silk Roads.
