You Talkin' To Me? - Sam Leith 2011-10-20

Rhetoric gives our words the power to inspire. But it's not just for politicians: it's all around us, whether you're buttering up a key client or persuading your children to eat their greens. You have been using rhetoric yourself, all your life. After all, you know what a rhetorical question is, don't you? In this updated edition of his classic guide, Sam Leith traces the art of argument from ancient Greece down to its many modern mutations. He introduces verbal villains from Hitler to Donald Trump - and the three musketeers: ethos, pathos and logos. He explains how rhetoric works in speeches from Cicero to Richard Nixon, and pays tribute to the rhetorical brilliance of AC/DC's "Back In Black". Before you know it, you'll be confident in chiasmus and proud of your panegyrics - because rhetoric is useful, relevant and absolutely nothing to be afraid of.

States of Inquiry - Oz Frankel 2006-07-21

"Performing, printing, and then circulating these studies, government established an economy of exchange with its diverse constituencies. In this medium, which Frankel terms "print statism," not only tangible objects such as reports and books but knowledge itself changed hands. The Bantu-Jareer Somalis - Mohamed A. Eno 2008

Somalia is generally thought of as a homogenous society, with a common

Arabic ancestry, a shared culture of nomadism and one Somali mother tongue. This study challenges this myth. Using the Jareer/Bantu as a case study, the book shows how the Negroid physical features of this ethnic group has become the basis for ethnic marginalization, stigma, social exclusion and apartheid in Somalia. The book is another contribution to the recent deconstruction of the perceived Somali homogeneity and self-same assertions. It argues that the Somalis, just like most societies, employ multiple levels of social and ethnic distinctions, one of which is the Jareer versus Jileec divide. Dr. Eno successfully portrays another Somalia, in which a mythical homogeneity masks the oppression and social exclusion suffered by some ethnic groups in the country.

Cooking Data - Crystal Biruk 2018-03-30

In *Cooking Data* Crystal Biruk offers an ethnographic account of research into the demographics of HIV and AIDS in Malawi to rethink the production of quantitative health data. While research practices are often understood within a clean/dirty binary, Biruk shows that data are never clean; rather, they are always “cooked” during their production and inevitably entangled with the lives of those who produce them. Examining how the relationships among fieldworkers, supervisors, respondents, and foreign demographers shape data, Biruk examines the ways in which units of information—such as survey questions and numbers written onto questionnaires by fieldworkers—acquire value as statistics that go on to shape national AIDS policy. Her approach illustrates how on-the-ground dynamics and research cultures mediate the production of global health statistics in ways that impact local economies and formulations of power and expertise.

A Survey on Requirements Elicitation - Martin Fehrenbach 2012-07-16

Research paper from the year 1998 in the subject Computer Science - Software, grade: 0, University of Kaiserslautern, language: English, abstract: The first step during the software development, requirements engineering, is very critical because of the high effort (in time and costs) that has to be made to correct mistakes detected later that have been made in this early phase of software life-cycle. In order to support the aim of high-quality software, the goals of requirements engineering are developing a complete as possible specification, providing integrated representation formalisms and accomplishing a common agreement on the specification. The very first activity that has to be passed through is requirements elicitation. There are existing three main problems: the problem of defining the scope, the problem of understanding the users' needs and the problem of requirements volatility over time. You can follow several heuristics and guidelines to find solutions to these problems. In addition, several techniques and methodologies have been suggested to support the process of requirements elicitation. They differ in several ways: the kind of problem they intend to solve, the methods used for achieving this aim, the kind of people involved, the level of abstraction and precision the requirements have to be formulated in. In this report, a selection of these techniques and methodologies is chosen and they are classified into a classification scheme worked out. The techniques and methodologies can coarsely be divided into four classes: interview-oriented approaches, objective and goal analysis-oriented

approaches, viewpoint analysis-oriented approaches, and scenario analysis-oriented approaches. There are others that do not fit into this division, but provide nevertheless help for requirements elicitation. The developed classification scheme highlights the differences between the existing techniques. It should serve as an overview of existing techniques and methods as a guideline for analysts and developers for finding an appropriate method for problems at hand.

Competitive Intelligence - Christopher Murphy 2016-05-23

Every business manager needs intelligence to find suppliers, mobilize capital, win customers and fend off rivals. Obtaining this is often an unplanned, instinctive process. The manager who has a conscious, systematic approach to acquiring intelligence will be better placed to recognize and seize opportunities whilst safeguarding the organization against the competitive risks that endanger its prosperity - and sometimes even its survival. Christopher Murphy's *Competitive Intelligence* explains: ¢ the theory of business competition ¢ how companies try to get ahead of their rivals ¢ methods of research and sources of information that generate the raw material for creating intelligence ¢ analytical techniques which transform the mass of facts and opinions thus retrieved into a platform of sound, useable knowledge to support informed business decision making. The text includes plenty of examples and experiences from the author's own consulting experience. He draws on a wide variety of disciplines, including literary criticism (or how to read between the lines of company reports, announcements and media stories) and anthropology (understanding corporate culture), as well as the more obvious ones such as financial analysis, management theory and business forecasting techniques. This fusion of insights from many fields of expertise provides a very readable, practical and imaginative framework for anyone seeking to gather and make effective use of market and company data. While focused on the British business environment, the lessons drawn are of universal application, and examples are taken from across the globe. In addition a chapter is devoted to researching industries and companies in other countries. Although primarily concerned with commercial enterprises, many of the principles and techniques will also be of considerable

practical relevance to managers in the public sector or not-for-profit organizations. Competitive Intelligence also provides a legal

Press, 2009-07

Combat the Deadly Sins of Project Management! Project management is a tough business. Not only must project managers contend with schedules, budgets, and a host of stakeholder demands, but they must also deal with sometimes vexing human behaviors, such as whining, indecision, opposition, inflexibility, complacency, and tunnel vision, to name a few. Projects can be negatively impacted by common "sins" that hinder, stall, or throw the project off track. In *The 77 Deadly Sins of Project Management*, the contributors focus on each "deadly sin" and probe its manifestations and consequences for projects. By sharing their personal experiences, as well as some historical events, the contributors spotlight the effects and costs — both financial and human — of failing to get a handle on these sins and reign them in. Through anecdotes and case studies, *The 77 Deadly Sins of Project Management* will help you better understand how to execute the myriad aspects of today's projects.

- Identify danger signs and solutions for each "sin"

- Gain practical and hands-on information from seasoned professionals

The 2019 conference allowed us to pay tribute to providers of CALL solutions and to recognize the complexity of their task. We hope you will enjoy reading this volume as it offers a rich glimpse into the numerous debates that took place during EuroCALL 2019. We look forward to continuing those debates and discussions with you at the next EuroCALL conferences!
